- Floodlights
- Spotlights

OFFICIAL PARTNER OF DAYLIGHT.

One of the many components that we control with our automation solutions is also our second core business area: lighting. This is most convenient, as the market sectors of automation and lighting are rapidly converging. We also believe that the best lighting solutions can only be achieved using intelligent control. After all, digital networking is the only way to create atmospheric and individual scenes. Similarly, high-quality sensors are the only way to implement continuous light control with energy-efficient use of daylight, while demand-driven automation is the only way to guarantee biologically effective, daylight-dependent lighting which is both of outstanding quality and sustainable.

In short, the only way to create the ideal lighting for people's needs is to combine the best possible light quality with just enough intelligence.

LIGHTING

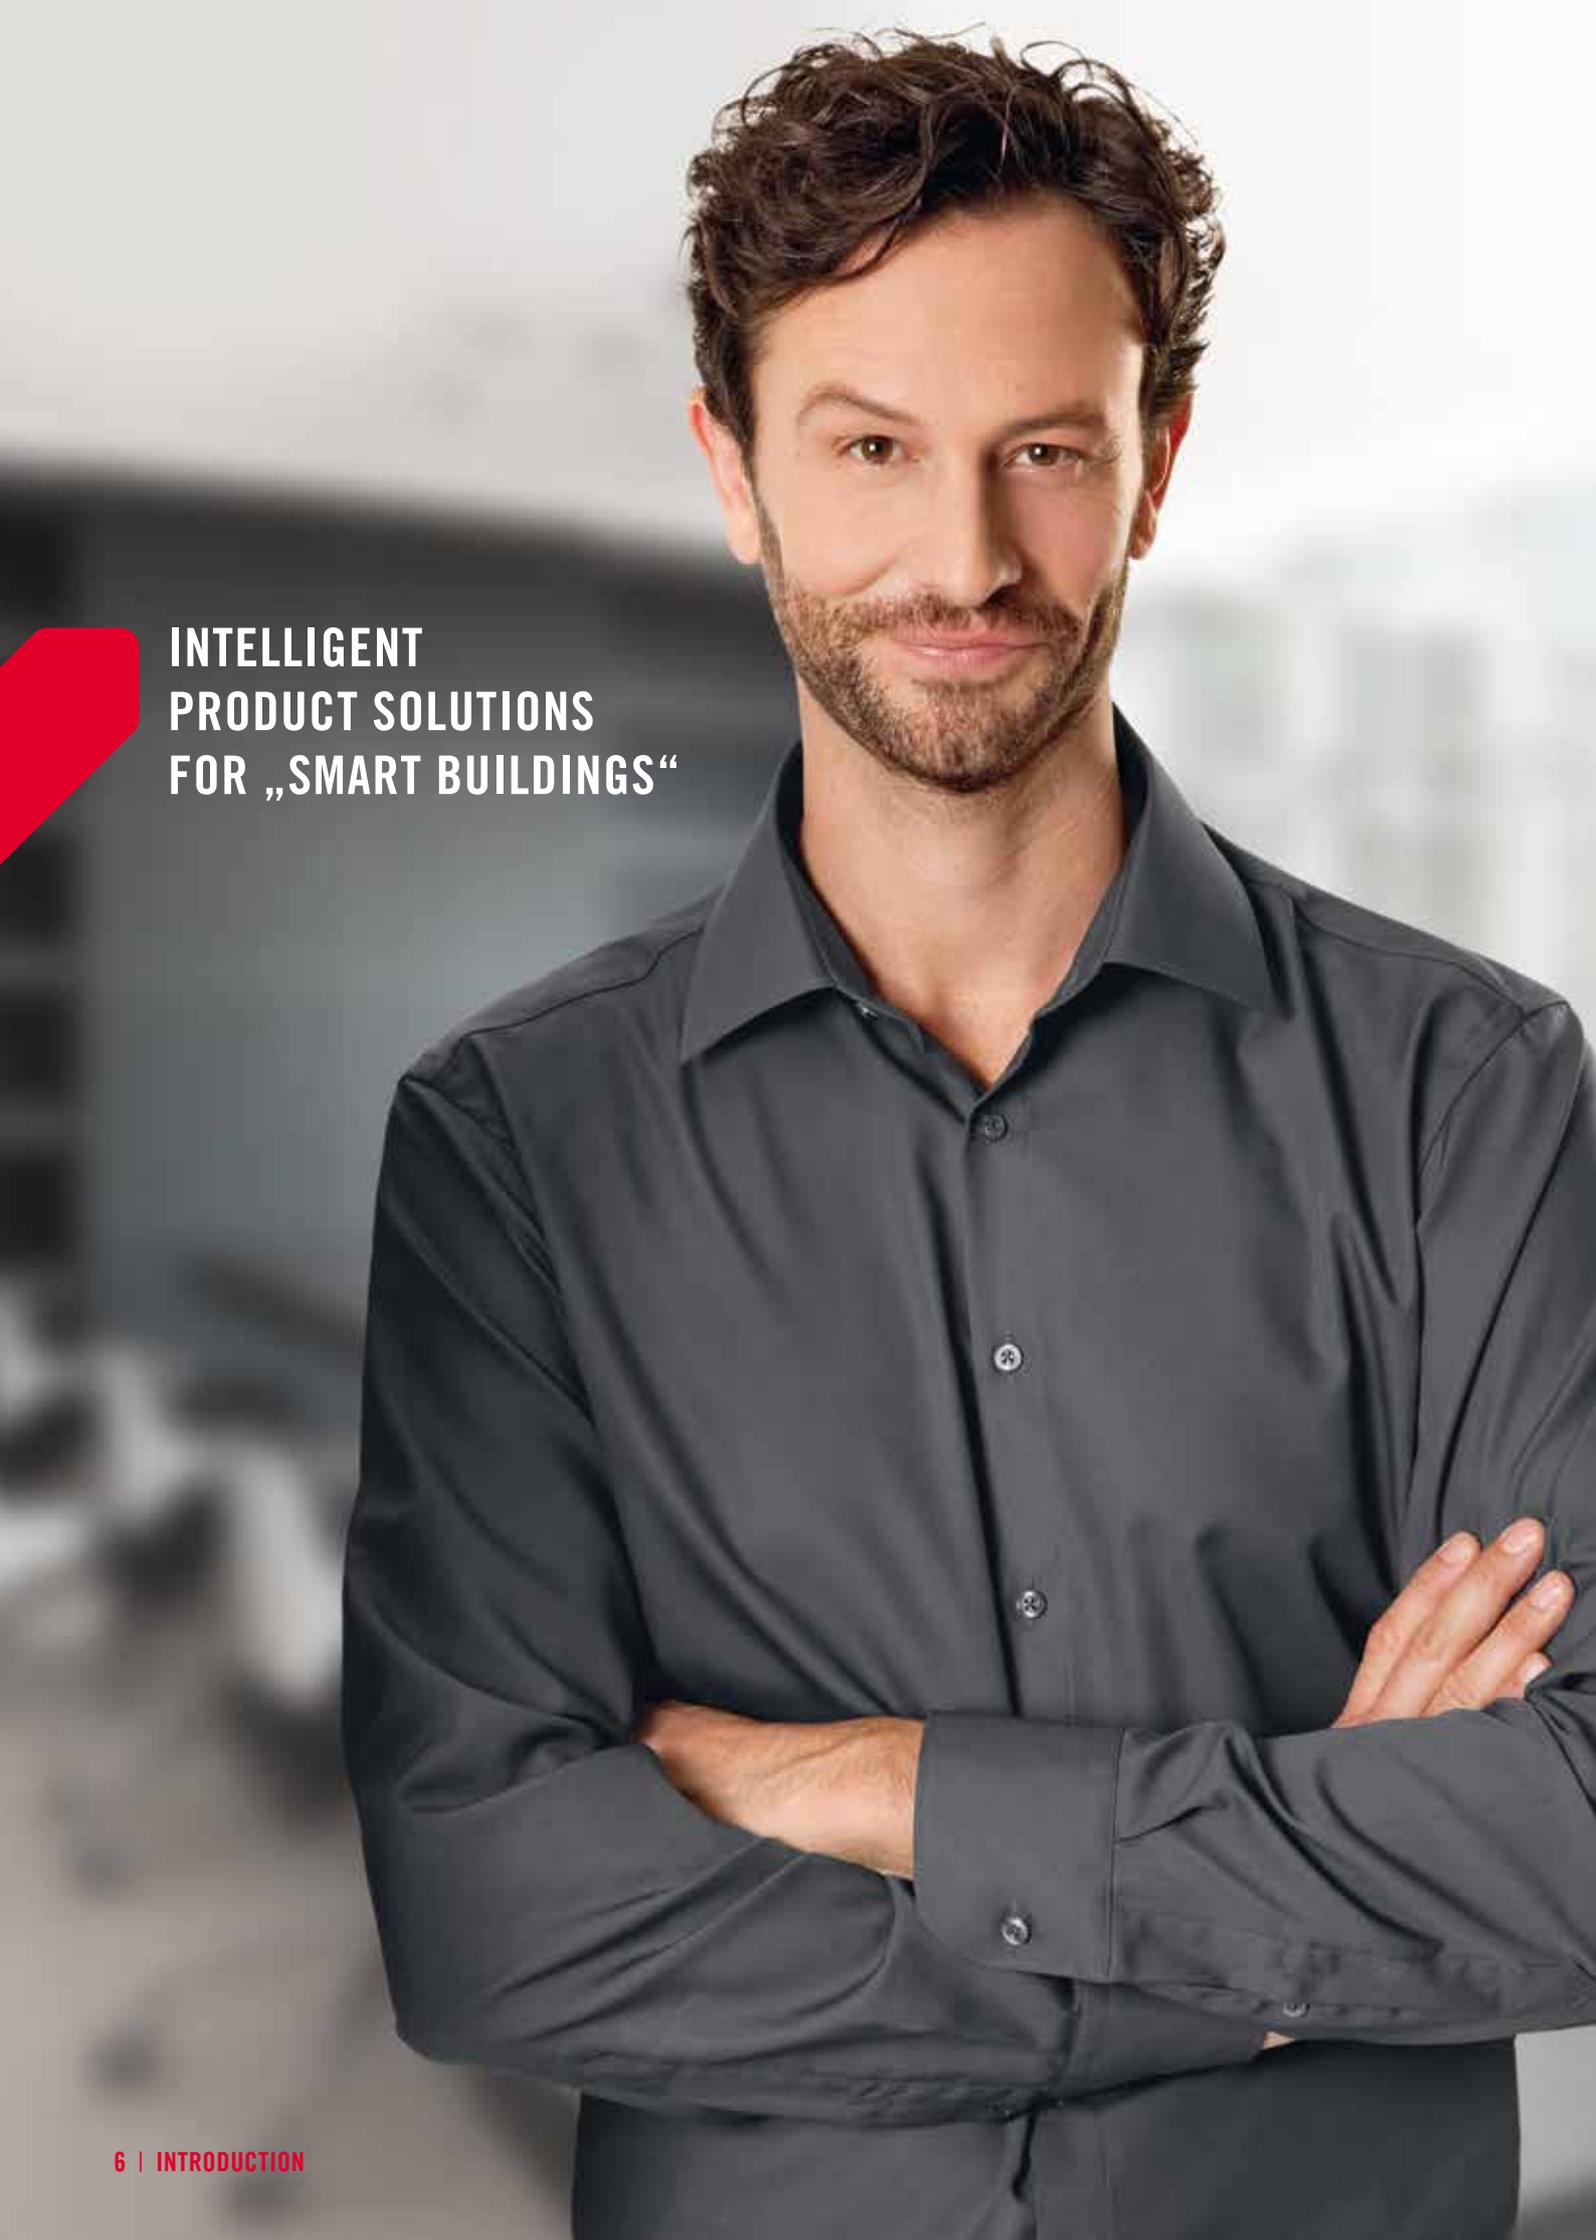

From high-quality floor lamps to striking up/downlights, everything you could possibly need to light up your surroundings brilliantly can be found in our catalogue.

PUBLICATIONS

It could not be simpler: scan the QR code and find all the ESYLUX catalogues, manuals and information brochures on the Internet.

**INTELLIGENT
PRODUCT SOLUTIONS
FOR „SMART BUILDINGS“**

ROOM AUTOMATION FOR MODERN REQUIREMENTS

AS SPECIALISTS IN DEMAND-DRIVEN BUILDING AUTOMATION, ESYLUX PRESENTS A COMPLETE PORTFOLIO OF INNOVATIVE PRODUCT SOLUTIONS WHOSE FUNCTIONALITY IS CONSISTENTLY TARGETED AT USERS' NEEDS.

CAREFULLY MATCHED COMBINATIONS OF SENSITIVE SENSOR TECHNOLOGY, INTELLIGENT CONTROL AND HIGH-QUALITY ACTUATORS IMPROVE QUALITY OF LIFE AND ENSURE THAT ENERGY IS ONLY USED WHEN IT IS REALLY NEEDED.

THIS MEANS THAT ESYLUX TECHNOLOGY SAVES MONEY, PROVIDES PEOPLE WITH MAXIMUM COMFORT AND UNDERLINES THE FACT THAT A WELL-THOUGHT OUT PRODUCT RANGE MEANS EVEN COMPLEX REQUIREMENTS CAN BE FILLED VERY EASILY.

ESYLUX — BECAUSE THERE IS AUTOMATICALLY A BETTER SOLUTION.

THE SENSOR AS THE USER'S ADVOCATE

Faced with the high pace of modern society and the daily flood of new information, an individual is unable to take care of everything themselves, nor should they have to. We can help by making their wishes and needs the focus of our technology.

Our intelligent sensors know exactly what people need — their finely tuned „senses“ can immediately detect when changes in the environment require a response and supply end devices and actuators with precise information on

what to do. In this way, as a central interface on the wall or ceiling, they create an atmosphere that lets people live and work better and be happier and more productive. People can take care of the things that are really important while also saving money.*

*Users of non-residential buildings often feel that energy consumption is not their responsibility, and so neglect to switch off lights and other devices. Demand-driven automation can cut energy costs by up to 70% for lighting alone. **Find out more in our energy efficiency brochure.**

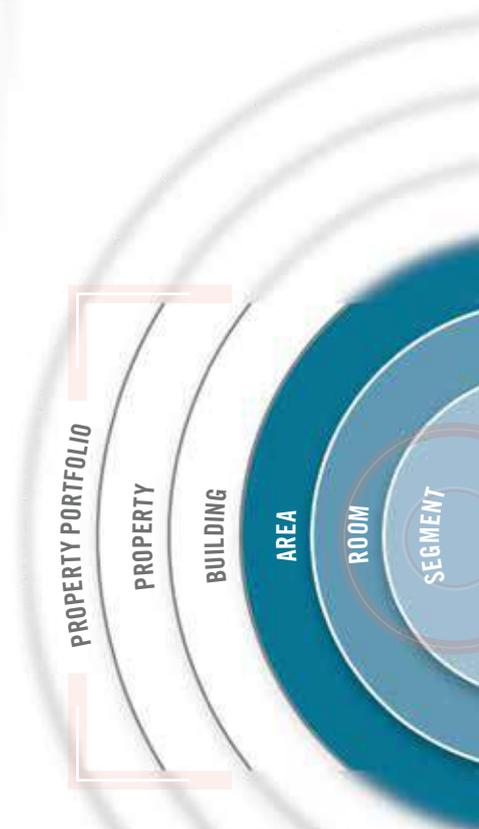

THE ROOM IN FOCUS

Our product range includes solutions for all areas of the building. From the car park to the lobby, in stairwells and along hallways, our technology accompanies individuals in their everyday life.

At the centre of our product development is the holistic automation of individual rooms. Anyone who wants to improve living conditions in a building must focus their expertise on the place where its users spend most of their time.

Whether individual products or a complete solution: our portfolio includes a complete range optimised for areas that are the epicentres of private and professional life, with a particular focus on non-residential buildings.

OUR SOLUTIONS

See page **326** onwards for real-life application examples of intelligent room and building automation using our product solutions. You will see concrete examples of ways in which sensors, additional modules and end devices can be combined together and used according to your specific demands.

RECOMMENDED PRODUCTS

GERMANY AS A SEAL OF APPROVAL

Top-notch engineering, creative ingenuity and dependable quality — attributes which people all over the world associate with German products. These qualities are therefore placed at the top of the agenda at our headquarters in Ahrensburg, near Hamburg. The German site is our preferred choice for research, development and production activities so that we can monitor all processes and procedures as closely as possible. It also guarantees that all of the components in our products are manufactured with painstaking care and to a high degree of precision. The solutions created in this way are characterised by a high level of quality down to the last detail, helping to renew our customers' trust in us on a daily basis.

A BETTER LIFE THANKS TO COMPLIANCE WITH THE REQUIRED STANDARDS

Strict compliance with all relevant regulatory and industrial standards during the development process also helps to build confidence in our product solutions. These standards help to protect the health of individuals and avoid overconsumption of the Earth's natural resources. As a sub-sector of building automation, room automation has now become an established feature of normative guidelines on energy saving, as well as an essential basis for combining maximum levels of energy efficiency with standards-compliant equipment for workplaces and functional areas. We deliver the technology to do this.

Our products comply with Version 4 of the LEED standard as specified by the US Green Building Council (USGBC).

THE ESYLUX SERVICE PROGRAMME

However well-thought-through a product may be, customers will always have questions. Providing excellent and easy-to-reach service is therefore part of our core philosophy, and a key element in our effort to provide simple solutions. Take advantage of our wide range of product-enhancing

services and allow us to provide you with valuable advice. Together, we can develop an individual or system solution tailored to your needs that will help your organisation take a decisive step forwards.

ESYLUX ACADEMY

Informing and instructing our customers is of utmost importance to us.

On a regular basis, the ESYLUX Academy therefore offers electrical planners and installers, architects and employees of electrical wholesalers the opportunity to undertake comprehensive further training — a service that can also be provided on request: the basic principles, standards, current trends and new solutions for planning and project management of demand-orientated control are all covered.

The programme also includes webinars that you can attend easily and free of charge from your own PC for a modern learning experience!

* Since 2013 we are involved as a certified KNX training center.

PLANNING AND PROJECT MANAGEMENT SUPPORT

If it is a question of completing a specific project, we offer on-demand support from the very beginning.

Experts from our project department are available to offer support from the earliest planning stage. They are on hand to help — from selecting the right product through to correct positioning and optimum functional planning. Our experts can also assist you with regard to energy efficiency and identifying and exploiting existing potential. Alternatively, you can find many useful tools on our website, such as our energy-savings calculator. When it comes specifically to light planning, you can also download our ESYLUX plugins for DIALux and Relux—both leading software providers for light-planning—at any time.

TECHNICAL HOTLINE

If questions need to be answered immediately and with a personal response, we are easy to reach.

Our very own experts are available for you to contact directly via the technical hotline, at no additional cost. Whether you have questions about technical features, assembly or installation, you can therefore receive first-hand, expert advice that is professional, friendly and fast.

You can find our number on the back page of this brochure.

EXTENDED MANUFACTURER'S WARRANTY

"Quality" is often just an empty promise. For us, it is an obligation.

Even when it comes to the warranty, we interpret the legal requirements as merely a minimum level. For the sake of our customers and to demonstrate our significant confidence in German engineering, we offer an extended three-year manufacturer's warranty for many products!

This means that you can be twice as certain that an ESYLUX product represents a truly long-term solution.

ONLINE DOCUMENTATION

Information is precious — if it is easy to find and use.

So that you can have simple, mobile access to the necessary facts at any time, we present the information regarding our products and technologies on the ESYLUX website in a way that is clear and optimised for all end devices (by using a responsive web design). You can find specific documentation such as operating instructions and data sheets on the respective product pages themselves. Furthermore, in the service section, you can find several supplementary publications such as brochures and videos.

That way, you can stay in the loop — even on the go!

A COMMITMENT TO ENERGY EFFICIENCY

As specialists in energy-efficiency solutions, we work together with other organisations to produce sustainable buildings.

ESYLUX is a member of the GEEA (*Allianz für Gebäude-Energie-Effizienz* — Alliance for Building Energy Efficiency), a cross-industry alliance with dena (*Deutsche Energie-Agentur GmbH* — the German Energy Agency). We are working with the German Sustainable Building Council to raise the profile of sustainable building with regard to certified "green buildings".

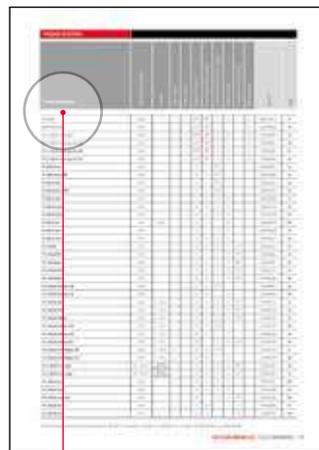

HELP GUIDE

EASY NAVIGATION THROUGH THE ESYLUX CATALOGUES

Table of contents

Are you looking for a specific chapter and the corresponding page number? Then look no further than the table of contents!

Decision-making tools

Do you already know what specific technical features a product is meant to have? Then it is worth taking a look at our decision-making matrix, which you will find on pages **36 - 41!**

Main sections and subsections

Do you want to know what's behind the respective product categories? On the home pages of the main section you will find a brief introduction to the general topic. A brief overview of selected features of our products serves as a starting point for the subsection.

Icons Product Groups

Do you find it easier to navigate with pictures? Our product group icons appear throughout the catalogue.

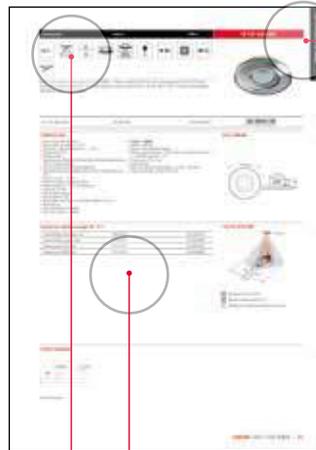

The search for simple solutions guides our thought process and actions, and not only in the development of our numerous products. In our publications we also try and keep things as simple and as clear as possible. So that you

can find what you really need, in addition to the table of contents we also offer you further tools designed to make the catalogue easy to work with.

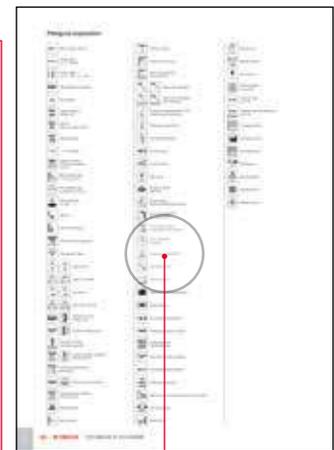

Footer for navigation

As a guide, you will find a footer on each page that shows the (sub)section you are currently paging through.

Cross-references to accessories

Have you chosen a product and are looking for suitable accessories? With cross-references we will take you straight to the right place.

Overview of pictograms

If you do not know what a particular icon means: The explanatory overview can be found on page 380.

Pictograms

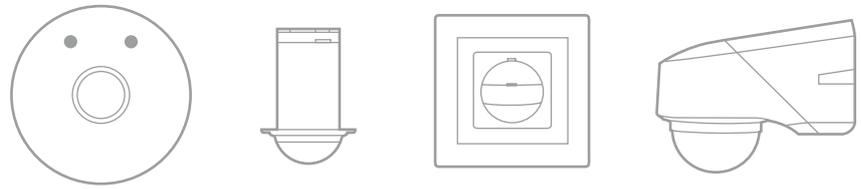

Pictograms on the product pages also help to quickly identify the technical features and capabilities of the products.

Tabs

Are you somewhere in the catalogue and you want to scroll quickly to a different heading? This is best done using the tabs!

SENSORS

PRESENCE AND MOTION DETECTORS

Eyes, ears, skin and nose - presence and motion detectors from ESYLUX can take on all of these properties if need be. With their sensors they pick up changes in the environment, just like the human senses do – and often with even greater sensitivity! Their high-quality lens design makes the ESYLUX presence and motion detectors ideal time bases in modern building automation. This is because the only way to control light, ventilation and air conditioning systems

such that energy consumption is effectively minimised is by using a sophisticated sensor concept. Incidentally, our presence and motion detectors do of course also increase comfort by relieving users of a number of hand movements and adapting precisely to their personal requirements, whether on a local basis in the room or centrally networked. Detectors also improve safety and, if they replace light switches, even improve hygiene.

PRESENCE AND MOTION DETECTORS BASIC SERIES

FUNDAMENTALLY EFFICIENT

The BASIC series offers a simple entry route into demand-driven automation. Its presence and motion detectors are ideal for particularly cost-sensitive projects or building areas which require simple functionalities without sacrificing quality. They feature the usual high-quality ESYLUX PIR and light sensors, and provide demand-driven and energy-efficient light switching via an output channel based on the

information captured by these sensors. The field of detection can also easily be extended in locations where a single detector is not enough by using a parallel connection or digital communications depending on the operating technology.

Surface mounting
with spacers (included)

Recessed ceiling mounting
with ceiling mounting set C (EP10425929, available separately, p. 256)

ADVANTAGES AT A GLANCE:

VERSATILE
Available as presence or motion detectors for ceiling or wall mounting

PROTECTIVE
Zero-cross switching to protect relays

TIME-SAVING
Factory settings for immediate operational readiness

REMOTE CONTROL
Electronic remote control options

WIDE FIELD OF VISION
360° field of detection with a range of 8 m in Ø.

POWERFUL
with 10-A (16-A for wall detectors) high-performance relays and additional button inputs

PRESENCE AND MOTION DETECTORS COMPACT SERIES CEILING-MOUNTED DETECTORS

THE ALL-ROUNDER

The PD-C/MD-C presence and motion detectors have successfully built themselves a reputation among our range of sensors not only as traditional favourites, but also as all-rounders. Their robust design and high level of performance are just as impressive as their huge versatility in terms of applications. The many different versions include ceiling and wall detectors for 230 V, KNX or DALI, with simple options for surface mounting, flush mounting or re-

cessed mounting, and fields of detection ranging from 8 to 24 metres. The bandwidth they provide allows either one or two-channel switching or dimming of lights. If there is a requirement to switch HVAC devices based on presence, suitable solutions are also available for this purpose.

Cover and design ring

Quick and easy to replace/paint (silver as accessory, p. 255)

Recessed ceiling mounting

with ceiling mounting set C (EP10425929, available separately p. 256)

THE ADVANTAGES OF CEILING DETECTORS AT A GLANCE:

REMOTE CONTROL
with blue mode technology

SENSITIVE TO EVERY SOUND
also available with acoustic sensors

SECURE
available as DRY version with floating contact

COST-EFFECTIVE
only uses approx. 0.3 W

FLEXIBLE
Surface mounting, flush mounting or recessed mounting, one and two channel switching and dimming devices, KNX, DALI or 12–36 V

VERSATILE
Presence or motion detectors
360° field of detection,
8 m, 24 m or 32 m range

PRESENCE AND MOTION DETECTORS COMPACT EXPRESS SERIES

HIDDEN HEROES

One of the reasons why the presence and motion detectors in the CE series are so impressive is their well-thought-out and compact design. The concept is designed to allow flush-mounted installation, guaranteeing a discreet appearance and ensuring that only the detector lens remains visible. The large wiring space makes it easy to connect detectors, and the practical plug-in terminals and optional plug-in connec-

tors ensure that the installation procedure is straightforward. As is usually the case for ESYLUX products, preconfigured factory settings mean that the system can be commissioned immediately. Easy-to-use remote control options mean that the parameters can also be adjusted to specific requirements at any later point.

Plug&Play solution:

Also available with 1 m pre-assembled Wieland/GST or WAGO plug-in connector for safe, quick and trouble-free installation.

ADVANTAGES AT A GLANCE:

TIME-SAVING
Thanks to spring clamp installation for 68-mm standard bore and Plug&Play using factory settings

REMOTE CONTROL
with blue mode technology

DISCREET
Recessed ceiling mounting, only the lens is visible

COMPACT
Complete device with integrated power section, double insulation

COST-EFFECTIVE
only uses approx. 0.3 W

VERSATILE
Presence or motion detectors with 8 or 24-m field of detection

PRESENCE AND MOTION DETECTORS COMPACT MINI SERIES FLAT MINI SERIES

TINY BUT POWERFUL

Our mini detectors are an ideal solution for rooms whose aesthetic design would be marred by the presence of technical components. Their tiny housings and extremely low installation heights mean that they retreat unobtrusively into the background, while nevertheless keeping a close eye on everything thanks to their high-quality sensor technology. The mini

sensors are available for all common operating technologies, and consistently impress clients thanks to the particular ease of installation. If a cavity is available, installation is a straightforward procedure using a locking ring or spring clamp. For concrete walls, the practical locking ring can be used for rapid and straightforward installation in brand switches.

Compatible with brand switches

The PD-C / MD-C360i/6 mini can be used to replace any conventional switch — also suitable for multi-switch frames

Small, unobtrusive and functional:

e.g. PD-C / MD-C360i/6 mini

ADVANTAGES AT A GLANCE:

VERSATILE

360° field of detection, 6, 8 or 12-m range, available for 230 V, DALI, KNX or 12–36 V

COMPACT

Saves space thanks to integrated power section and high-performance relay

REMOTE CONTROL

with blue mode technology

TIME-SAVING

with locking ring or spring clamp installation

COST-EFFECTIVE

Only 0.3-W energy consumption

DESIGNER PRESENCE AND MOTION DETECTORS FLAT SERIES

OUTSTANDINGLY FLAT

Whether in the entrance area of an upmarket wellness hotel or a prestigious board office — many locations feature exquisite interior décor which demands equally attractive room technology. The FLAT presence and motion detectors by ESYLUX fulfil this requirement with stylish elegance.

The lenses are flattened in order to ensure a particularly discreet appearance. The wide variety of cover designs means that the ideal choice is available for every taste — round or rectangular designs in various colours, and even with a glazed surface where necessary. The FLAT detectors combine energy efficiency, comfort and safety with elegance, whether on the wall or ceiling.

Zero-cross switching

Thanks to their zero-cross switching behaviour, the 230-V detectors protect their own relays, providing a highly sustainable operating concept.

ADVANTAGES AT A GLANCE:

VERSATILE
Available as a 230 V device or DALI version, with GST plug-in connector or including a ceiling mounting box

TIME-SAVING
DALI broadcast for simple activation

VARIETY OF LOOKS
Available in many housing designs

FLAT
Just 6.8 mm when surface-mounted on ceilings

WIDE FIELD OF VISION
Range of more than 8 m in Ø at an installation height of 3 m.

AUTONOMOUS
Independent configuration of DALI electronic ballasts

OUTDOOR MOTION DETECTORS RC SERIES

FLEXIBLE DETECTION FOR YOUR FAÇADE

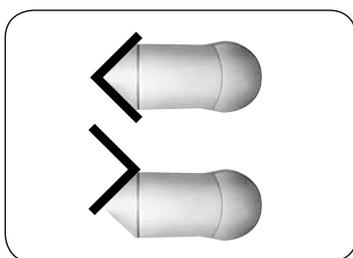

Outdoor motion detectors require not only reliable and accurate sensors, but crucially also a robust and weather-resistant design. Our RC series is sure to last for many years in outdoor environments thanks to the use of appropriate protection types and guaranteed resistance to extreme temperatures. Not only that, but they also feature a high level of adaptabil-

ity to local outdoor conditions. As well as 360° anti-creep protection, the RC motion detectors also feature a special base which allows simple installation on both inner and outer corners — whether on the wall or ceiling!

Ceiling mounting

Without accessories — simply turn the base

Corner mounting

With accessory part: RC corner bracket p. 262

ADVANTAGES AT A GLANCE:

VERSATILE
130, 230 or 280° field of detection,
white, brown, black
and stainless steel appearance

TIME-SAVING
Problem-free installation
thanks to the special base

COST-EFFECTIVE
only uses approx. 0.3 W

VERSATILE
Suitable for mounting on interior and exterior
corners and for ceiling mounting

FLEXIBLE
Range can be altered by
mechanically adjusting the
internal lens mask

VANDAL-PROOF
thanks to retractable setting
elements

FLEXIBLE II
Field of detection can be
adjusted by horizontally rotating
the head and lens mask

ALERT
with 360° anti-creep
protection

KNX PRESENCE AND MOTION DETECTORS ATMO®SERIES

POWERFUL MULTI-SENSORS

The ATMO presence detector is the perfect example to demonstrate the capability and the potential of our technology, using just one product solution. At its highest level of configuration, its unique multi-sensor technology enables it to detect changes in lighting, humidity, temperature and air quality and ensure optimal brightness as well as maintaining a healthy,

FOCUS ON HEALTH, PERFORMANCE AND ENERGY EFFICIENCY

Air quality is often regarded as synonymous with CO₂ content. But CO₂ is only one of many contributory factors, not to mention that it is odourless. The VOC value is much more informative*: This measures anthropogenic emissions, e.g. from plastics and construction materials, carpets or cleaning agents, as well as biogenic emissions from people or food-stuffs. All of these are everyday occurrences, particularly in enclosed spaces.

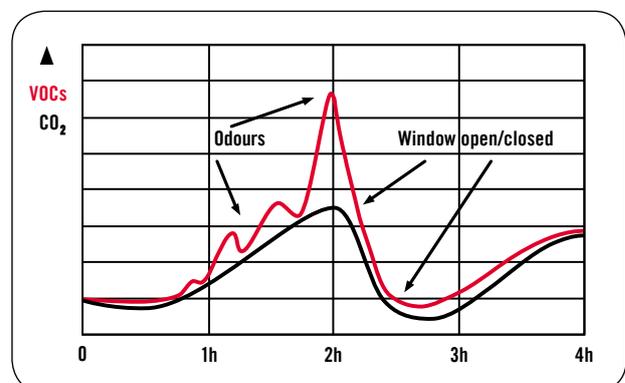

The problem is that excessive concentrations of these mixed gases can have a negative effect on people's moods, as well as causing typical symptoms of "sick building syndrome" such as sore eyes, headaches, tiredness or dizziness. All of these have the effect of reducing staff efficiency, and VOCs are therefore the single most important reason to ventilate a building.

At its highest configuration level, ATMO solves this problem automatically and saves energy in the process. As well as ensuring that rooms are only ventilated when they are oc-

cupied, the series also restricts the operation of ventilation systems to times when they are actually needed on the basis of current air quality.

productive and comfortable ambient climate. An acoustic sensor can be used to complement the PIR presence detectors in particularly challenging situations. With a total of six "senses" in just one device, there is no need for several individual solutions. This shows just how easy it is to accommodate complex requirements using intelligent technology.

*VOC stands for Volatile Organic Compounds

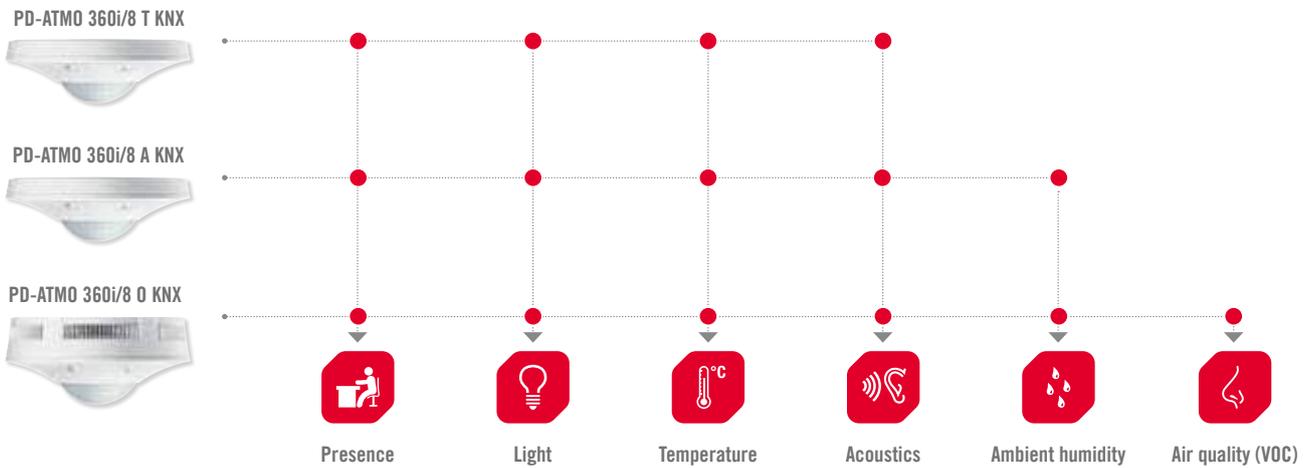

Use in a conference room:

CO₂ sensors (black) do not react to odours, cigarette smoke or other VOCs. VOC sensors (red) therefore perform measurements which are much more targeted to user needs.

6 SENSES IN ONE DEVICE

PRESENCE DETECTORS

Premises with **natural light** that are used for extended periods, particularly suitable for seated activities.

APPLICATION EXAMPLES

<ul style="list-style-type: none"> - Offices - Classrooms - Meeting and conference rooms - Archives - Libraries 	
<ul style="list-style-type: none"> - Corridors/hallways - Stairwells - Basements - Bathrooms/toilets 	
<ul style="list-style-type: none"> - Sports halls - Storage and exhibition halls - Industrial and commercial facilities - Car parks 	

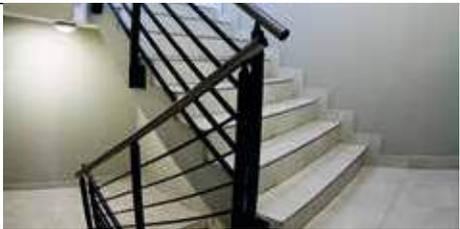

HOW IT WORKS

<ul style="list-style-type: none"> - Responds to even the smallest of movements and presence, including in particular seated activities 	Sensing
<ul style="list-style-type: none"> - Indoors - Maximum energy savings: With automatic light control according to use and the amount of natural light available - Premises with natural light that are used for long periods - Switching when required or desired - Constant light control/DIM - Further control options, such as activation of heating, ventilation, air-conditioning (HVAC) 	Area of application
<ul style="list-style-type: none"> - Light + HVAC (heating, ventilation, air conditioning) - Light 1 + Light 2 (individual light measurement per switching output) + HVAC - Light/1–10 V (continuous light control/DIM) + HVAC - KNX, DALI/DSI 	Switching output/activation
<ul style="list-style-type: none"> - Light channel: Activated according to availability of natural light and presence. - HVAC channel: Only with presence - Light measurement remains active: If the ambient/natural light is sufficient, the artificial light/light channel is switched off despite the detected motion = mixed photometry 	Switch-on criterion + light measurement

MOTION DETECTORS

For premises without or **with very little natural light**, that are used for short periods or with greater movement.

APPLICATION EXAMPLES

<ul style="list-style-type: none"> - Corridors/hallways - Stairwells - Entrance areas - Basements - Cellar and storage rooms - Side rooms 	
<ul style="list-style-type: none"> - Underground car parks - Garages - Car parks 	
<ul style="list-style-type: none"> - Changing rooms - Bathrooms - Baths - Toilets 	

HOW IT WORKS

<ul style="list-style-type: none"> - Respond to larger walking movements 	Sensing
<ul style="list-style-type: none"> - Indoors - Energy savings - Premises without or with very little natural light that are used for short periods - Switching when required or desired - Security in dark areas, particularly walkways - Also with protection type IP 54/55/65 	Area of application
<ul style="list-style-type: none"> - Light 	Switching output
<ul style="list-style-type: none"> - Light channel: Simple switching output, with switching according to the ambient brightness (ambient light is below the light value preset on the detector) and motion. - Photometry is no longer active after activation: Consumers/artificial light remains switched on as long as motion is detected = unique photometry 	Switch-on criterion + light measurement

SIMPLE

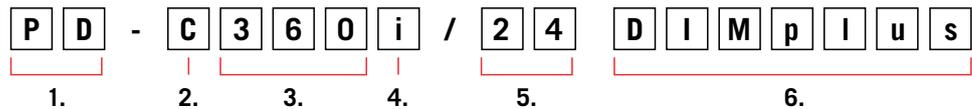

TO THE RIGHT PRODUCT

It is not always easy to find the correct product in an extensive product range. The product key and the selection matrix on the following pages are intended to help you identify the correct presence or motion detector.

The product key defines in brief what the various designations of our detectors signify. By using the product key, you

can often tell from the product name alone whether a particular product is the right one for you. And if you need more precise information, then the selection matrix provides a clear listing of all the key technical features. That means you can quickly find out which products are suitable for your purposes, and where they can be found in the catalogue.

Product key - Example

1. Device type	PD	=	Presence detectors
	MD	=	Motion detectors
2. Series	BASIC	=	Introductory products
	C	=	Compact
	CE	=	Compact Express (recessed ceiling mounted version)
	mini	=	small recessed ceiling mounted version
	FLAT	=	flat construction
	ATMO	=	Multisensor
	RC	=	high quality outdoor sensor
3.	Sensing range		in degrees
4.	Remote controllable		i = infrared
5.	∅ Range		in meters (mounting height 3 m)
6. Function	plus	=	HVAC contact
	Touch	=	Operation possible by touch
	MIC	=	In-built acoustic sensor
	DRY	=	Break contact/floating
	DUO	=	2-channel light measurement
	DIM	=	Continuous lighting control
	R	=	Relay output
	CU-C Light	=	for ESYLUX Light Control
	DC24V	=	12 - 24 V DC
	DALI	=	DALI lighting control
	KNX	=	KNX (EIB) bus technology
	UP	=	Software upgrade
	ECO	=	Product variant with reduced functionality
	UC	=	12 - 36 V AC/DC
	SM	=	Surface-mounted version
	SMB	=	Surface-mounted version including box
FM	=	Flush-mounted version	
GST	=	Pre-assembled WIELAND/GST 18-line	
WAGO	=	Pre-assembled WAGO WINSTA® line	
Slave	=	Auxiliary post

PRESENCE AND MOTION DETECTORS

Our selection of presence and motion detectors is highly diverse for a wide variety of everyday applications for the 230 V range. Whether for motion detection in long corridors, ceiling installation at particularly great height, or additional activation of heating, ventilation or air-conditioning systems with a floating switching contact — ESYLUX offers specially developed product solutions for all common applica-

tions, both inside and outside buildings, which will suit even the most complex conditions. With fields of detection of 6–24 meters, the products are designed for all conventional mounting situations and have flexible switching and dimming outputs and versatile configuration options, including by remote control.

MD 180i/16 BASIC

Order description

Order no.

EAN no.

Wall-mounted motion detector with 180° field of detection and 16 A high-performance relay (tungsten pre-contact), can be programmed by remote control, compatible with brand switches, protection type IP40, in-built impulse feature for controlling automatic stairwell lights or control devices, switch input

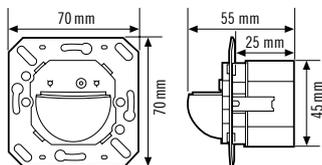

MD 180i/16 Basic white

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Approx. power consumption: < 0.3 W
- Setting options: electronically via infrared remote control
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: IP 40
- Protection class: II
- Installation type: Wall mounting
- Housing material: UV-stabilised polycarbonate
- Approx. dimensions: Height 70 mm x Width 70 mm x Depth 49 mm
- Installation dimension: Installation depth 20 mm, Installation hole size Ø 68 mm
- Terminal: 1.5 mm²
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Field of detection: 180° horizontal, 60° vertical
- Range: approx. 16 m in Ø, at an installation height of 1,1 m to 2,2 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC 50 Hz, W/10 A (cos φ; = 1), 1150 VA/5 A (cos φ; =0.5)
- In-rush current: 78 A / 5 ms
- Switch input: yes
- Switch-off delay time: impulse/approx. 1 min. – 60 min.

FIELD OF DETECTION

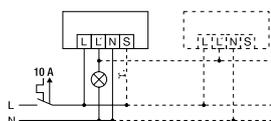

- Head-on to detector
- Passage area/diagonally to detector

Order description	Order no.	EAN no.	MD 180i/16 BASIC SET SKJ
-------------------	-----------	---------	---------------------------------

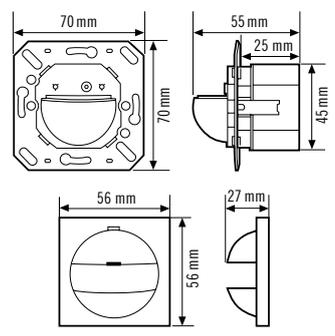

Wall-mounted motion detector with 180° field of detection and 16 A high-performance relay (tungsten pre-contact), can be programmed by remote control, compatible with brand switches, protection type IP40, in-built impulse feature for controlling automatic stairwell lights or control devices, switch input

MD 180i/16 Basic Set SKJ	EB10430640	4015120430640	
--------------------------	------------	---------------	--

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Setting options: electronically via infrared remote control
 - Permissible ambient temperature: 0 °C ...+50 °C
 - Protection type: IP 40
 - Protection class: II
 - Installation type: Wall mounting
 - Housing material: UV-stabilised polycarbonate
 - Approx. dimensions: Height 70 mm x Width 70 mm x Depth 49 mm
 - Installation dimension: Installation depth 20 mm, Installation hole size Ø 68 mm
 - Terminal: 1.5 mm²
 - Included in delivery: including cover IP 20-SKJ white
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Approx. power consumption: < 0.3 W
 - Field of detection: 180° horizontal, 60° vertical
 - Range: approx. 16 m in Ø, at an installation height of 1,1 m to 2,2 m
 - Slave input: no
 - Light measurement: mixed light
 - Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
 - Interface: Switching
 - Contact: make contact/non-floating
 - Switching capacity channel 1: 230 V AC 50 Hz, 2300 W/10 A (cos φ = 1), 1150 VA/5 A (cos φ = 0.5)
 - In-rush current: 78 A / 5 ms
 - Switch input: yes
 - Switch-off delay time: impulse/approx. 1 min. – 60 min.
 - Colour: white

FIELD OF DETECTION

Note: Order cover and remote control separately.

Note: A max. of 6 „slave“ devices can be connected to one „master“. The installation cable between “master” and “slave” devices must not exceed 100 m in length.

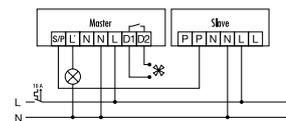

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: a maximum of 6 slave devices may be connected to one master device.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

- „Slave“ presence detector for extending the field of detection of a „master“ presence detector with 360° field of detection for ceiling mounting
- Range of up to 8 m in diameter as a cost efficient system upgrade with up to 6 additional extensions
- „Slave“ detector can be connected to the following presence detectors:
- PD 360i/8
- PD 360i/24
- PD 360i/Korridor
- PD 180i/R

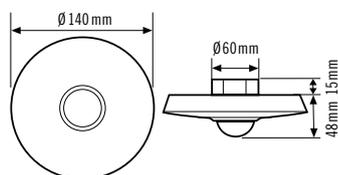

PD 360/8 Slave white

EM10425028

4015120425028

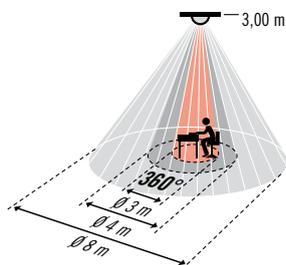

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Approx. power consumption: < 0.4 W
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: recessed-mounted IP 20, IP 54 with surface-mounted box (order separately)
- Protection class: II
- Housing material: UV-stabilised polycarbonate
- Approx. dimensions: Height 63 mm, Ø 140 mm
- Installation dimension: Installation depth 15 mm, Installation hole size Ø 68 mm
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Field of detection: 360°
- Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
- **Channel 1: Presence**
- Colour: white, similar to RAL 9010

FIELD OF DETECTION

- Operating area approx. Ø 3 m
- Head-on to detector approx. Ø 4 m
- Passage area / diagonally to detector approx. Ø 8 m

Accessories (detailed on page 246 - 271)

Note: A max. of 6 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.
Note: The cover and design ring can be interchanged and painted; the device colour can therefore be adapted to the installation location.

Order description	Order no.	EAN no.	PD 360/24 SLAVE
-------------------	-----------	---------	------------------------

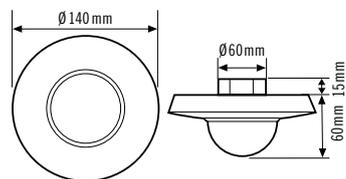

- „Slave“ presence detector for extending the field of detection of a „master“ presence detector with 360° field of detection for ceiling mounting
- Range of up to 24 m in diameter as a cost efficient system upgrade with up to 6 additional extensions
- Ideal for use in areas with ceilings of up to 10 m, such as sports halls, warehouses etc.
- „Slave“ detector can be connected to the following presence detectors:
- PD 360i/8
- PD 360i/24
- PD 360i/Korridor
- PD 180i/R

Order description

Order no.

EAN no.

230 V ~	16 m	180°		c1		Zubehör Accessory	IP 20	IP 44 Zubehör Accessory
	IR)))	Frame accessory not included						

- Wall-mounted motion detector with 180° field of detection
- 16 A high-performance relay (tungsten pre-contact)
- Touch function for easy operation
- 5 selection programs can be called by touch function
- Programmable by remote control
- Compatible with brand switches
- IP40 degree of protection
- Integrated impulse function for activation of automatic stairwell lights or signalling devices
- Switch input

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Setting options: electronically via infrared remote control
 - Permissible ambient temperature: 0 °C ...+50 °C
 - Protection type: IP 40
 - Protection class: II
 - Installation type: Wall mounting
 - Housing material: UV-stabilised polycarbonate
 - Installation dimension: Installation depth 23 mm, Installation hole size Ø 68 mm
 - Terminal: 1.5 mm²
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Approx. power consumption: < 0.3 W
 - Field of detection: 180° horizontal, 60° vertical
 - Range: approx. 16 m in Ø, at an installation height of 1,1 to 2,2 m
 - Slave input: no
 - Light measurement: mixed light
 - Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
 - Interface: Switching
 - Contact: make contact/floating
 - Switching capacity channel 1: 230 V AC 50 Hz (16 A relay), 2300 W/4.5 A (cos phi = 1), 500 VA/2.25 A (cos phi = 0.5)
 - In-rush current: 800 A / 200 µs
 - Switch input: yes
 - Switch-off delay time: impulse/approx. 1 min. – 60 min.

FIELD OF DETECTION

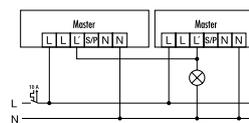

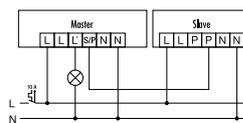

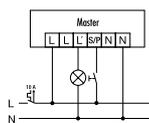

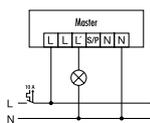

- Head-on to detector
- Passage area/diagonally to detector

FIELDS OF DETECTION

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: a maximum of 6 slave devices may be connected to one master device.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

Note: Can only be used together with ESYLUX Light Control!

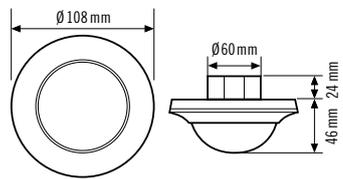

- Presence detector with 360° field of detection for ceiling mounting
- Range of up to 24 m in the diameter at a recommended installation height of 3 m
- Automatic light control with 2 floating break contacts for controlling lighting on separate phases or via a 230 V AC emergency power supply, depending on presence and natural light
- Ideal for use in areas with ceilings of up to 10 m, such as sports halls, warehouses etc.
- Default settings ensure immediate operability

FIELDS OF DETECTION

- Operating area approx. Ø 8 m
- Head-on to detector approx. Ø 11 m
- Passage area / diagonally to detector approx. Ø 24 m

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

- Standard operation**
- Standard operation with additional control** by means of a closing button. If required, the light can be manually switched on or off with the button.
- Master-slave switching:** The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.
- Standard operation (PD-C360i/24 DRY and ILR-230V current limiting module).** When using electronic ballasts, an up to 40-fold in-rush current is to be expected. For full load (max. 690 W), an ESYLUX current limiting module must be used.
- Operation with connection on separate phases as master/slave circuit:** The master device controls connected systems according to the settings. The purpose of a slave device is solely to register presence and transmit a signal to the master device upon detection of presence.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

- Presence detector with 360° field of detection for ceiling mounting
- Range of up to 8 m in diameter at a recommended installation height of 3 m (maximum mounting height 5 m)
- Automatic light control (channel 1) to a constant brightness level depending on presence and natural light (1 - 10 V DC interface)
- Additional HVAC switch contact (channel 2) for switching an additional light source or controlling heating, ventilation and air conditioning depending on presence
- 16 A high-performance relay (tungsten pre-contact)
- Default settings ensure immediate operability

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Approx. power consumption: < 0.3 W
 - Setting options: mechanically by adjusting controller, electronically by infrared Mobil-PDi/plus, Mobil-PDi/User remote controls (order separately)
 - Permissible ambient temperature: 0 °C ... +50 °C
 - Protection type: recessed-mounted IP 20, IP 54 with surface-mounted box (order separately), IP 20 as recessed ceiling-mounted version (order installation set separately)
 - Protection class: II
 - Installation type: Ceiling mounting
 - Housing material: UV-stabilised polycarbonate
 - Approx. dimensions: Height 38 mm, Ø 108 mm
 - Installation dimension: Installation depth 24 mm, Installation hole size Ø 68 mm
 - Terminal: 2.5 mm² / 1.5 mm²
 - Included in delivery: includes lens mask
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Silicone-free housing: yes
 - Field of detection: 360°
 - Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
 - Slave input: yes
 - Light measurement: mixed light
 - Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
 - Interface: switching/dimming
 - Contact: make contact/floating
 - Switching capacity channel 1: 230 V AC 50 Hz (16 A relay), 2300 W/4.5 A (cos phi = 1), 500 VA/2.25 A (cos phi = 0.5)
 - In-rush current: 800 A / 200 µs
 - Switch input: yes
 - Control output: 1 - 10 V =/50 mA
 - Switch-off delay time: approx. 1 minute - 30 minutes
 - Orientation light: 10 % luminous efficiency
 - Switch-off delay time, orientation light: approx. 1 minute - 60 minutes
 - **Channel 2: HVAC**
 - Exit: Switching
 - Switching capacity channel 2: 230 V AC 50 Hz, 1000 W/4.5 A (cos phi; = 1), 500 VA/2.25 A (cos phi; = 0.5), Capacitive load/electronic ballasts max. in-rush current 30 A/20 ms
 - Switch input: yes
 - Contact: make contact/non-floating
 - Switch-off delay channel 2: impulse/approx. 5 minute - 120 minutes
 - Colour: white, similar to RAL 9010

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between “master” and “slave” devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

Standard operation

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

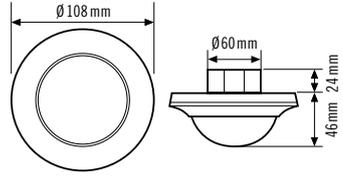

- Presence detector with 360° field of detection for ceiling mounting.
- range of up to 32 m, elliptic detection range of 32 m in length and 4 m in width, at an installation height of 10 m (maximum installation height approximately 15 m)
- Automatic light control (channel 1) to a constant brightness level (at a height of up to 5 m) depending on presence and daylight (1 - 10 V = interface)
- Additional HVAC switch contact (channel 2) for switching an additional light source or controlling heating, ventilation and air conditioning depending on presence
- 16 A high-performance relay (tungsten pre-contact)
- Default settings ensure immediate operability

FIELD OF DETECTION

Passage area / diagonally to detector

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

- Standard operation**
- Standard operation with additional control by means of a closing button.** If required, the light can be manually switched on or off with the button.
- Master-slave switching:** The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

- Supply line: With 1.5 m pre-assembled WAGO WINSTA® inlet and outlet
- Included in delivery: includes lens mask
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Field of detection: 360°
- Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC 50 Hz (16 A relay), 2300 W/10 A (cos phi = 1), 1150 VA/5 A (cos phi = 0.5)
- In-rush current: 800 A / 200 µs
- Switch input: yes
- Switch-off delay time: impulse/approx. 1 minute – 30 minutes
- Colour: Opal matt

FIELD OF DETECTION

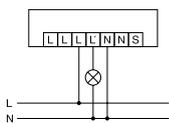

- Head-on to detector approx. Ø 4 m
- Passage area / diagonally to detector approx. Ø 8 m

Accessories (detailed on page 246 - 271)

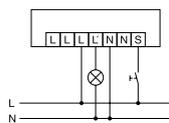

• Mobil-PDi/MDi silver/metallic blue	EM10425509	4015120425509
• Mobil-PDi/MDi-universal white	EP10433993	4015120433993
• Basket guard 165/70 white	EM10425615	4015120425615
• RC filter/snubber	EP10426988	4015120426988

Note: a max. of 10 devices can be connected parallel. The max. line length should not exceed 100 m.

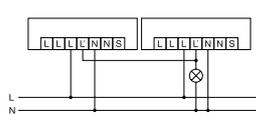

CIRCUIT DIAGRAMS

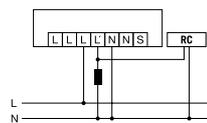

Standard operation

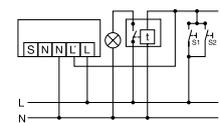

Standard operation with additional control by means of a button.

Parallel connection of max. 10 motion detectors.

An RC filter may be required when connecting inductors (e.g. relays, contactors, ballasts).

Parallel connection with automatic stairwell light.

- Recessed ceiling-mounted motion detector with 360° field of detection
- Large range of up to 24 m in diameter at a recommended installation height of 3 m (maximum mounting height 5 m), suitable for a variety of uses
- 16 A high-performance relay (tungsten pre-contact)
- Default settings ensure immediate operability

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

Order description	Order no.	EAN no.	PD-CE360/24 SLAVE
-------------------	-----------	---------	--------------------------

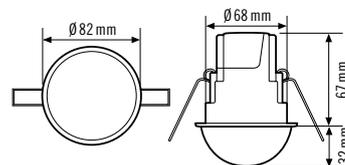

- „Slave“ presence detector for extending the field of detection of a „master“ presence detector with 360° field of detection for recessed ceiling mounting
- range of up to 24 m in diameter as a cost efficient system upgrade with up to 10 additional extensions
- Ideal for use in areas with ceilings of up to 10 m, such as sports halls, warehouses etc.
- „Slave“ detector can be connected to the following presence detectors:
- PD-CE360i/8 / PD-CE360i/8 GST / PD-CE360i/8 WAGO
- PD-CE360i/24 / PD-CE360i/24 GST / PD-CE360i/24 WAGO

-----------------------------	------------	---------------	--

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: IP 40
- Protection class: II
- Installation type: Recessed ceiling mounting
- Housing material: UV-stabilised polycarbonate, UV-stabilised PE
- Approx. dimensions: Height 99 mm, Ø 82 mm
- Installation dimension: Installation depth 67 mm, Installation hole size Ø 68 mm
- Terminal: 1.5 mm²
- Included in delivery: inklusive Linssenmaske
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Approx. power consumption: < 0.3 W
- Field of detection: 360°
- Range: approx. 24 m in Ø, at an installation height of 3 m to 10 m
- **Channel 1: Lighting**
- Colour: Opal matt

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Approx. power consumption: 0.2 W
- Setting options: electronically by infrared Mobil-PDi/MDi, Mobil-PDi/MDi-universal (order separately)
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: IP 65
- Protection class: II
- Installation type: Recessed ceiling mounting, wall mounting (switch manufacturer accessory)
- Housing material: UV-stabilised PE
- Approx. dimensions: Height 47 mm, Ø 25 mm
- Installation dimension: Installation depth [mm] 36 mm, Installation hole size Ø 20 mm
- Supply line: 20 cm, 3 x 0.75 single conductor
- Included in delivery: includes lens mask, spring installation clips, clamping installation ring
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Field of detection: 360°
- Range: approx. 6 m in Ø, at an installation height of 3 m to 5 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC/50 Hz 690 W/3 A (cos phi = 1), 345 VA/1.5 A (cos phi = 0.5)
- In-rush current: 30 A / 20 ms
- Switch input: no
- Switch-off delay time: impulse/approx. 1 minute – 15 minutes
- Colour: Opal matt

FIELDS OF DETECTION

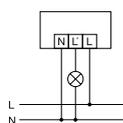

- Head-on to detector approx. Ø 2.5 m
- Passage area / diagonally to detector approx. Ø 6 m

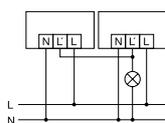

Accessories (detailed on page 246 - 271)

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

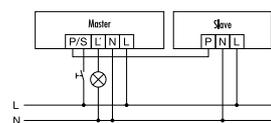

CIRCUIT DIAGRAMS

Standard operation

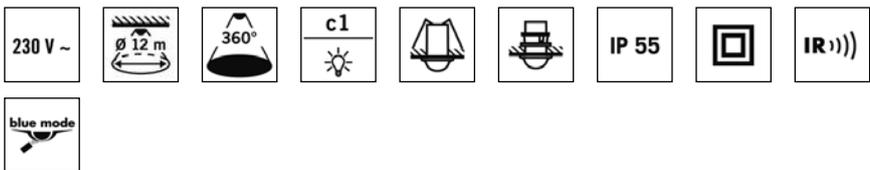

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

- Approx. dimensions: Height 70 mm, Ø 58 mm
- Installation dimension: Installation depth [mm] 45 mm, Installation hole size Ø 25 mm
- Supply line: 60 cm, 4 x 1.00 mm²
- PD-C360i/12 mini-3m: Supply line: 300 cm, 4 x 1.00 mm²
- Included in delivery: includes lens mask, spring installation clips, clamping installation ring
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Approx. power consumption: 0.2 W
- Field of detection: 360°
- Range: approx. 12 m in Ø, at an installation height of 3 m to 5 m
- Slave input: yes
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC 50 Hz (16 A relay), 2300 W/10 A (cos phi = 1), 1150 VA/5 A (cos phi = 0.5)
- In-rush current: 800 A / 200 µs
- Switch input: yes
- Switch-off delay time: impulse/approx. 1 minute – 30 minutes
- Colour: Opal matt

FIELDS OF DETECTION

- Operating area approx. Ø 4 m
- Head-on to detector approx. Ø 6 m
- Passage area / diagonally to detector approx. Ø 12 m

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

PD-C360i/8 MINI DIM

Order description

Order no.

EAN no.

- Mini presence detector with 360° field of detection for recessed ceiling mounting
- range of up to 8 m in diameter for use in small rooms, passageways, small offices and hallways with natural lighting
- Automatic light control to a constant brightness level, depending on presence and natural light (1 - 10 V DC interface)
- 16 A high-performance relay (tungsten pre-contact)
- Default settings ensure immediate operability

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: IP 20
- Protection class: II
- Installation type: Recessed ceiling mounting, Recessed ceiling mounting, Wall and ceiling mounting
- Housing material: UV-stabilised polycarbonate
- Installation dimension: Installation depth [mm] 24 mm, Installation hole size Ø 68
- Terminal: 2,5 mm² / 1,5 mm²
- Included in delivery: includes lens mask
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: no
- Approx. power consumption: < 0.3 W
- Field of detection: 360°
- Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC 50 Hz, 2300 W/10 A (cos φ; = 1), 1150 VA/5 A (cos φ; =0.5)
- In-rush current: 78 A / 5 ms
- Switch input: yes
- Switch-off delay time: impulse/approx. 1 minute – 30 minutes
- Colour: white, similar to RAL 9010

FIELDS OF DETECTION

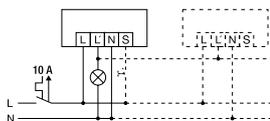

- Head-on to detector approx. Ø 4 m
- Passage area / diagonally to detector approx. Ø 8 m

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Permissible ambient temperature: 0 °C ...+50 °C
- Protection type: IP 20
- Protection class: II
- Installation type: Recessed ceiling mounting, Recessed ceiling mounting, Wall and ceiling mounting
- Housing material: UV-stabilised polycarbonate
- Installation dimension: Installation depth [mm] 24 mm, Installation hole size Ø 68
- Terminal: 2,5 mm² / 1,5 mm²
- Included in delivery: includes lens mask
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: no
- Approx. power consumption: < 0.3 W
- Field of detection: 360°
- Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/non-floating
- Switching capacity channel 1: 230 V AC 50 Hz, 2300 W/10 A (cos φ; = 1), 1150 VA/5 A (cos φ; =0.5)
- In-rush current: 78 A / 5 ms
- Switch input: yes
- Switch-off delay time: impulse/approx. 1 minute – 30 minutes
- Colour: white, similar to RAL 9010

FIELDS OF DETECTION

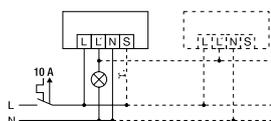

- Head-on to detector approx. Ø 4 m
- Passage area / diagonally to detector approx. Ø 8 m

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Permissible ambient temperature: 0 °C ...+50 °C
 - Protection type: IP 20
 - Protection class: II
 - Installation type: Recessed ceiling mounting, Recessed ceiling mounting, Wall and ceiling mounting
 - Housing material: UV-stabilised polycarbonate
 - Installation dimension: Installation depth [mm] 24 mm, Installation hole size Ø 68
 - Terminal: 2,5 mm² / 1,5 mm²
 - Included in delivery: includes lens mask
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Silicone-free housing: no
 - Approx. power consumption: < 0.3 W
 - Field of detection: 360°
 - Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
 - Slave input: no
 - Light measurement: mixed light
 - Light value: approx. 5 - 2000 lux
- **Channel 1: Lighting**
 - Interface: Switching
 - Contact: make contact/non-floating
 - Switching capacity channel 1: 230 V AC 50 Hz, 2300 W/10 A (cos φ; = 1), 1150 VA/5 A (cos φ; = 0.5)

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Approx. power consumption: < 0.8 W
 - Setting options: mechanically by adjusting controller
 - Permissible ambient temperature: -25 °C ... +55 °C
 - Protection type: IP 44
 - Protection class: II
 - Installation type: Wall mounting, Mounting on inner and outer corners possible with accessories
 - Housing material: UV-stabilised polycarbonate
 - Approx. dimensions: Height 81 mm x Width 74 mm x Length 102 mm
 - Conformity: CE, RoHS
 - Field of detection: 120° sensor horizontally rotatable +/- 90°
 - Range: approx. 12 m, at an installation height of 2,5 m
 - Range adjustment: mechanically by tilting the motion detector head max 80°
 - Slave input: no
 - Light value: approx. 2 - 1000 lux
- **Channel 1: Lighting**
 - Interface: Switching
 - Contact: make contact/non-floating
 - Switching capacity channel 1: 230 V AC 50 Hz, 1000 W/4.5 A (cos φ; = 1), 500 VA/2.25 A (cos φ; = 0.5)
 - In-rush current: 30 A / 20 ms
 - Switch-off delay time: approx. 4 sec. - 10 mins.
 - Colour: white, similar to RAL 9010

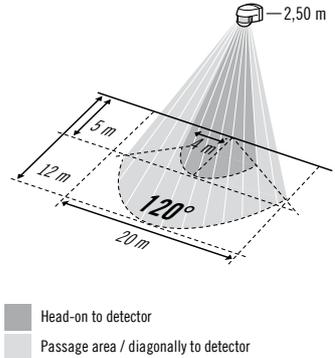

SCALE DRAWING

Accessories (detailed on page 246 - 271)

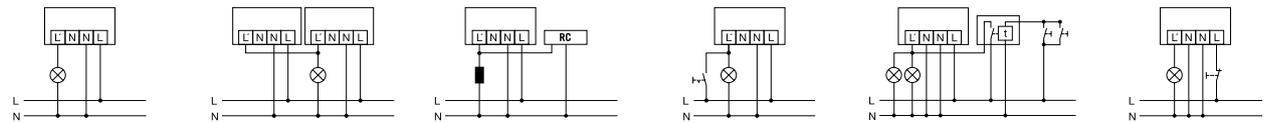

• RC filter/snubber	EP10426988	4015120426988
• MD corner bracket white	EM10025518	4015120025518

FIELDS OF DETECTION

Note: the device is compatible with the automatic floodlights AF 150/200, AF 300/200 and AF 500/200.
Note: a max. of 8 devices can be connected parallel. The max. line length should not exceed 100 m.

CIRCUIT DIAGRAMS

Standard operation

A maximum of 8 devices can be connected in parallel.

An RC filter may be required when connecting inductors (e.g. relays, contactors, ballasts).

Standard operation with additional continuous lighting function through external switch.

Parallel connection with automatic stairwell light.

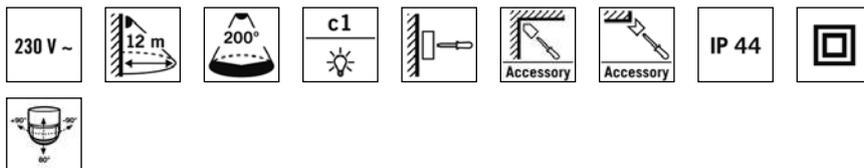

Standard operation with additional control by means of an opener button. If required, the light can be manually switched on or off with the button.

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
 - Setting options: mechanically by adjusting controller, electronically by infrared Mobil-RCi, Mobil-RCi-M remote controls (order separately)
 - Permissible ambient temperature: -25 °C ...+55 °C
 - Protection type: IP 54
 - Protection class: II
 - Installation type: Wall and ceiling mounting, Mounting on inner and outer corners possible with accessories
 - Housing material: UV-stabilised polycarbonate
 - Approx. dimensions: Height 105 mm x Width 78 mm x Length 135 mm
 - Included in delivery: includes lens mask
 - Approx. power consumption: < 0.3 W
 - Field of detection: 130° and 360° anti-creep protection
 - Range: approx. 20 m, at an installation height of 2,5 m
 - Range adjustment: electronic, Mechanical, For each sensor, 1 x 130°
 - Slave input: no
 - Light value: approx. 2 - 2500 lux
- **Channel 1: Lighting**
 - Interface: Switching
 - Contact: make contact/non-floating
 - Switching capacity channel 1: 230 V AC 50 Hz (16 A relay), 2300 W/10 A (cos phi = 1), 1150 VA/5 A (cos phi = 0.5)
 - In-rush current: Capacitive load/electronic ballasts max. in-rush current 100 A/200 µs
 - Switch-off delay time: impulse/approx. 15 sec.–30 min.
 - Colour: white, similar to RAL 9010

• RC corner bracket white	EM10016110	4015120016110

FIELD OF DETECTION

Note: a max. of 8 devices can be connected parallel. The max. line length should not exceed 100 m.

CIRCUIT DIAGRAMS

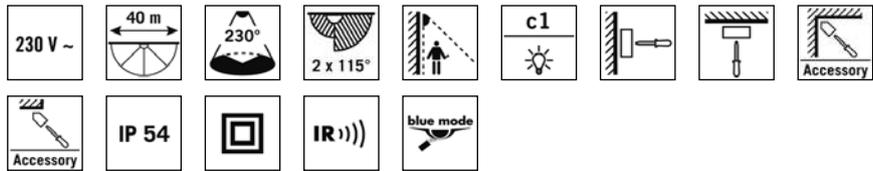

- Standard operation
- A maximum of 8 devices can be connected in parallel.
- An RC filter may be required when connecting inductors (e.g. relays, contactors, ballasts).
- Standard operation with additional continuous lighting function through external switch.
- Parallel connection with automatic stairwell light
- Standard operation with additional control by means of an opener button. If required, the light can be manually switched on or off with the button.

DALI

PRESENCE DETECTORS

Using digital signals to control LED lighting is child's play with DALI. That is why its simple cabling, polarity-free wiring, optimum LED dimming and easy scene control have established a new global standard. ESY-LUX offers a wide range of sensors in this area so that room light levels can be measured accurately and lighting can be flexibly adapted to local and

individual requirements. Factory pre-programming means that commissioning is a straightforward procedure, even if conventional devices also need to be integrated into presence detector circuits: The DALI switch is ready in the blink of an eye!

PD-FLAT 360i/6 MINI DALI

Order description

Order no.

EAN no.

- Presence detector with 360° field of detection for ceiling mounting
- Range of up to 6m in diameter at a recommended installation height of 3 m
- flat lens with an installation height of only 3 mm
- Automatic light control of DALI electronic ballasts to achieve a constant brightness level, depending on presence and natural light (with DALI-output)
- Can be combined with DALI push buttons
- HVAC and potential-free contact possible in conjunction with DALI switch from ESYLUX

• SW DALI Full Automation	EP10427473	4015120427473

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

Order description	Order no.	EAN no.	PD-FLAT 360I/8 ROUND WHITE DALI
-------------------	-----------	---------	---------------------------------

DALI design presence detector with excellent sensing capabilities, at least 8 m in diameter. Low profile design with plastic design covers: round, white - variably interchangeable (alternatively: square, glass, black)

TECHNICAL DATA

- Mains voltage: DALI BUS
 - Power consumption: 12 mA
 - Permissible ambient temperature: 0 °C ...+50 °C
 - Protection type: IP 20
 - Installation type: Recessed ceiling mounting
 - Housing material: UV-stabilised polycarbonate
 - Installation dimension: Installation depth [mm] 24 mm, Installation hole size Ø 68 mm
 - Terminal: 2,5 mm² / 1,5 mm²
 - Included in delivery: includes lens mask
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Silicone-free housing: no
 - Approx. power consumption: < 0.3 W
 - Field of detection: 360°
 - Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
 - Range adjustment: mechanically with internal lens cover
 - Slave input: yes, via DALI
 - Light measurement: mixed light
 - Light value: approx. 5 - 10000 lux
- Bus voltage: 9.5 - 22.5 V DC
 - DALI output 1: DALI bus/broadcast
 - **Channel 1: Lighting**
 - Interface: DALI
 - Switch input: yes
 - Switch-off delay time: impulse/approx. 1 minute – 15 minutes
 - Orientation light: 10 % to 50 % luminous efficiency
 - Switch-off delay time, orientation light: disabled/ approx. 1 minute – 250 min.
 - Colour: white, similar to RAL 9010

KNX

PRESENCE AND MOTION DETECTORS

KNX
SENSORS

In the complex world of building automation, standards ensure a minimum degree of compatibility and stability when combining different technologies. KNX is one such standard that, due to its decentralised structure, is particularly reliant on the inherent intelligence of the networked devices. It goes without saying that ESYLUX offers an extensive range of

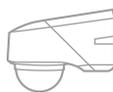

solutions in this respect. As well as being easy to configure using ETS (Engineering Tool Software) and providing users with a great many parameterisation options, the KNX detectors control end devices on the basis of actual measured values, therefore exploiting every conceivable advantage of intelligent digital automation.

RC 230i KNX

Order description

Order no.

EAN no.

- KNX Motion detector with 230° field of detection and large range
- 360° anti-creep protection for unbroken coverage
- For use in KNX (EIB), TP (twisted pair) bus system in conjunction with other KNX components
- Parameter and function settings via ETS (Engineering Tool Software)

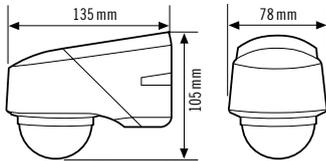

RC 230i KNX white

EM10015472

4015120015472

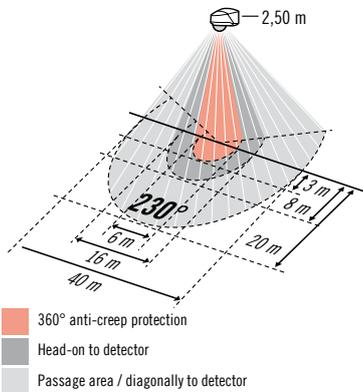

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: from KNX bus 29 - 31 V
- Power consumption: 6 mA
- Setting options: remotely with ETS-Software, temporarily electronically by infrared Mobil-RCi-M remote control (order separately)
- Permissible ambient temperature: -25 °C ...+55 °C
- Protection type: IP 54
- Protection class: III
- Installation type: Wall and ceiling mounting, Mounting on inner and outer corners possible with accessories
- Housing material: UV-stabilised polycarbonate
- Approx. dimensions: Height 105 mm x Width 78 mm x Length 135 mm
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Field of detection: 230° (2 x 115° separately adjustable) and 360° anti-creep protection
- Range: approx. 20 m in Ø, at an installation height of 2,5 m
- Slave input: yes, device can be configured as master or slave
- Light measurement: mixed light
- Light value: approx. 2 - 2500 lux
- Bus voltage: 29 - 31 V = (KNX)
- Sensitivity configurable via ETS: yes
- Sends a telegram at regular intervals: yes
- Master/slave function: true
- Constant light control: true
- Presence simulation: true
- Manual override: Yes, manual, yes, via IR
- Interface: KNX
- Switch-off delay time: disabled/30 seconds to 30 min
- Turn-on delay: disabled/2 min - 30 min
- Switch-off delay channel 2: 10 sec.-1 hours
- Orientation light: disabled/10 - 50 %, 2 values can be selected
- Switch-off delay time, orientation light: only in controlling modus: continuous lighting/1 min - 250 min
- Colour: white, similar to RAL 9010

FIELDS OF DETECTION

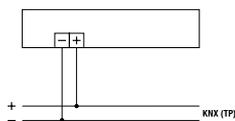

Accessories (detailed on page 246 - 271)

• Mobil-RCi-M silver	EM10016011	4015120016011
• RC corner bracket white	EM10016110	4015120016110

Note: The product database and application can be downloaded free of charge from www.esylux.com.

Order description	Order no.	EAN no.	PD 360/8 KNX BASIC
-------------------	-----------	---------	---------------------------

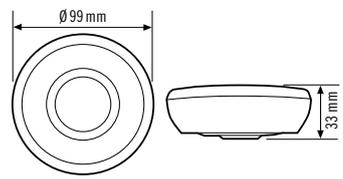

- KNX Ceiling-mounted presence detector with 360° field of detection
- Range of up to 8 m in the diameter at a recommended installation height of 3 m for convenience applications
- For use in KNX (EIB), TP (twisted pair) bus system in conjunction with other KNX components
- Parameter and function settings via ETS (Engineering Tool Software)

PD 360/8 KNX Basic	EB10430442	4015120430442	
--------------------	------------	---------------	--

TECHNICAL DATA

- Mains voltage: from KNX bus 29 - 31 V
 - Power consumption: 6 mA
 - Setting options: remotely with ETS-Software
 - Permissible ambient temperature: 5 °C ...+35 °C
 - Protection type: IP 40
 - Protection class: III
 - Installation type: Recessed ceiling mounting
 - Housing material: UV-stabilised polycarbonate
 - Approx. dimensions: Height 75 mm, Ø 100 mm
 - Included in delivery: includes lens mask
 - Relative humidity: 5 - 93 %, non-condensing
 - Conformity: CE, RoHS
 - Silicone-free housing: yes
 - Field of detection: 360°
 - Range: approx. 8 m in Ø, at an installation height of 3 m to 5 m
 - Slave input: yes, device can be configured as master or slave
 - Light measurement: mixed light
 - Light value: disabled/approx. 5 - 2000 lux
 - Bus voltage: 29 - 31 V = (KNX)
 - KNX output: Light channel c1
- KNX input: manual light control, block objects, reset, slave
 - Sensitivity configurable via ETS: no
 - **Light channel:** c1 switching
 - Sends a telegram at regular intervals: no
 - Master/slave function: true
 - Constant light control: false
 - Presence simulation: false
 - Manual override: Yes, manual, yes, via IR
 - Night-light feature: no
 - Interface: KNX
 - Switch-off delay time: disabled/30 seconds to 30 min
 - Colour: white, similar to RAL 9010

CIRCUIT DIAGRAMS

Standard operation

- KNX Presence detector with 180° field of detection for wall mounting
- Simple touch operation by contact on the smoke alarm
- Range of up to 16 m in the diameter at a recommended installation height of 1.1 - 2.2 m
- In-built acoustic sensor perfect for use in areas with a complex layout
- For use in KNX (EIB), TP (twisted pair) bus system in conjunction with other KNX components
- Parameter and function settings via ETS (Engineering Tool Software)

PD-C360i/12 MINI KNX

Order description

Order no.

EAN no.

- KNX Mini presence detector with 360° field of detection for recessed ceiling mounting.
- range of up to 12 m in the diameter at a recommended installation height of 3 m
- For use in KNX (EIB), TP (twisted pair) bus system in conjunction with other KNX components
- Parameter and function settings via ETS (Engineering Tool Software)

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: from KNX bus 29 - 31 V
- Power consumption: 6 mA
- Setting options: remotely with ETS-Software, temporarily electronically by infrared Mobil-PDi/User and Mobil-PDi/MDi-universal remote controls (order separately)
- Permissible ambient temperature: 5 °C ...+35 °C
- Protection type: IP 55
- Protection class: III
- Installation type: Recessed ceiling mounting
- Housing material: UV-stabilised polycarbonate
- Approx. dimensions: Height 70 mm, Ø 58 mm
- Installation dimension: Installation depth 45 mm, Installation hole size Ø 25 mm
- Supply line: approx. 20 cm, including plug
- Included in delivery: includes lens mask, spring installation clips, clamping installation ring
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Field of detection: 360°
- Range: approx. 12 m in Ø, at an installation height of 3 m to 5 m
- Slave input: yes, device can be configured as master or slave
- Light measurement: mixed light
- Light value: disabled/ approx. 5 - 2000 lux
- Bus voltage: 29 - 31 V = (KNX)
- KNX output: presence, status, light value, HVAC
- KNX input: manual light control, block objects, reset, slave
- Sensitivity configurable via ETS: yes
- **Light channel:** c1 + c2 switching/dimming, c2 offset from c1 (-80 % to +80 %)
- Sends a telegram at regular intervals: yes
- Master/slave function: true
- Constant light control: true
- Presence simulation: true
- Manual override: Yes, manual, yes, via IR
- Night-light feature: yes
- Interface: KNX
- Switch-off delay time: disabled/30 sec. - 12 hours
- Turn-on delay: disabled/2 min - 30 min
- Switch-off delay channel 2: 10 sec.-1 hours
- Orientation light: disabled/10 - 50 %, 2 values can be selected
- Switch-off delay time, orientation light: only in controlling modus: continuous lighting/1 min - 250 min
- Switch-on delay channel 3: disabled/2 min - 30 min
- Switch-off delay channel 3: disabled/10 seconds/1 minute/12 hours
- Colour: Opal matt

FIELD OF DETECTION

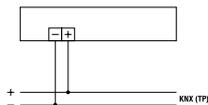

- Operating area approx. Ø 4 m
- Head-on to detector approx. Ø 6 m
- Passage area / diagonally to detector approx. Ø 12 m

PRESENCE AND MOTION DETECTORS

Compatibility is the be-all and end-all of modern building automation. Flexibility and adaptability are essential in order to achieve optimum energy efficiency on the basis of centralised and cross-component building control. This is why ESYLUX allows planners and installation technicians to use the high performance of the ESYLUX technology standard in the low voltage range as well. The particularly flexible

presence and motion detectors with UC (universal current) interface technology are compatible with all standard PLC and miniature control systems in the 12–36 V range, for both DC and AC voltage. This means that large developers and system integrators can also rely on proven ESYLUX quality to find the ideal solution for their needs.

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: 12 V DC
- Setting options: electronically by infrared Mobil-PDi DUO/MDi remote control (order separately)
- Permissible ambient temperature: -10 °C ...+50 °C
- Protection type: IP 65
- Protection class: III
- Installation type: Recessed ceiling mounting, wall mounting (switch manufacturer accessory)
- Housing material: UV-stabilised PE
- Approx. dimensions: Height 47 mm, Ø 25 mm
- Installation dimension: Installation depth 36 mm, Installation hole size Ø 20 mm
- Supply line: 1.5 m (3 x 0.75 single conductor)
- Included in delivery: includes lens mask, spring installation clips, clamping installation ring
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Silicone-free housing: yes
- Approx. power consumption: < 0.3 W
- Field of detection: 360°
- Range: approx. 6 m in Ø, at an installation height of 3 m to 5 m
- Slave input: no
- Light measurement: mixed light
- Light value: approx. 10 lux - daytime operation
- **Channel 1: Lighting**
- Interface: Switching
- Contact: make contact/floating
- Switching capacity channel 1: 12 V DC/3 A
- Switch input: no
- Switch-off delay time: impulse/approx. 1 minute – 15 minutes
- Colour: Opal matt

FIELD OF DETECTION

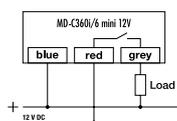

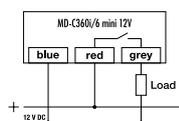

- Head-on to detector approx. Ø 2.5 m
- Passage area / diagonally to detector approx. Ø 6 m

Accessories (detailed on page 246 - 271)

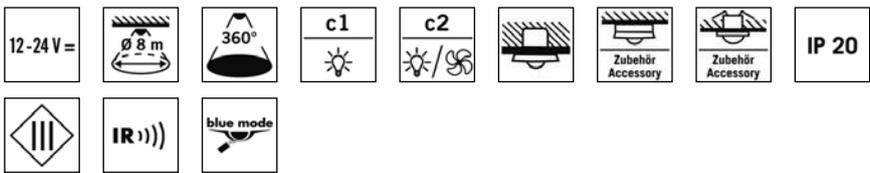

• Mobil-PDi/MDi silver/metallic blue	EM10425509	4015120425509
• Mobil-PDi/MDi-universal white	EP10433993	4015120433993

FIELD OF DETECTION

- Operating area approx. Ø 4 m
- Head-on to detector approx. Ø 6 m
- Passage area / diagonally to detector approx. Ø 8 m

Note: A max. of 10 „slave“ devices can be connected to one „master“. The installation cable between „master“ and „slave“ devices must not exceed 100 m in length.

CIRCUIT DIAGRAMS

Standard operation

Standard operation with additional control by means of a closing button. If required, the light can be manually switched on or off with the button.

Master-slave switching: The master device controls connected systems according to the programmed settings. The sole purpose of the slave devices is to register presence and transmit an impulse to the master device when movement is detected. Caution: A maximum of 10 slave devices may be connected to one master.

Note: The parallel connection of two or more presence detectors is not possible. The appropriate slave devices (available as accessories) must be used to extend the field of detection.

12-24 V =							

- Presence detector for 12 - 24 V DC with 360° field of detection for ceiling mounting
- Range of up to 24 m in diameter at a recommended installation height of 3 m for use in offices, classrooms and board rooms, for example, and passageways with natural lighting
- Ideal for use in areas with ceilings of up to 10 m, such as sports halls, warehouses etc.
- Additional HVAC switch contact (channel 2) for controlling heating, ventilation and air conditioning depending on presence
- Default settings ensure immediate operability

Order description	Order no.	EAN no.	PD-CE360i/24 UC
-------------------	-----------	---------	------------------------

- Presence detector with 360° field of detection for recessed ceiling mounting
- range of up to 24 m in diameter for use in connection with building management systems
- Operating voltage 12-36 V DC or AC voltage
- Potential-free software-controlled switching output (C/O)
- Connectable and disconnectable display of detection
- Silent switch up to the maximum of 2 A

SENSORS

BRIGHTNESS CONTROLLER

Optimum lighting conditions can only be achieved through the intelligent combination of artificial lighting and ambient brightness. Presence and motion detectors play a key role in this respect by featuring mixed photometry and daylight-dependent continuous lighting control, but separate brightness controller allow an even higher level

of individuality and flexibility. They can be used to considerably increase the number of measuring points and thus the overall precision and resolution of the lighting. Whether used on their own or to complement our detectors, they optimise light as required, right into the most remote corner of a building.

FLAT mini series	230 - 233
Accessories	246 - 271

LIGHT SENSORS

The LS FLAT mini KNX brightness controller ensures that a better level of individuality, flexibility and energy efficiency can be achieved for any lighting control system. Hidden in a tiny, compact housing with a mounting height of only 3 mm, its targeted light measurement can be used to switch, regulate or control two separate lighting channels. It can also account for up to two external lighting values alongside

its own value. Operating several of these devices together or combining them with the light sensor technology of presence detectors enables virtually unlimited possibilities for multi-point measurements and cascading. Any customer looking for a highly precise method of detecting daylight will also benefit from a very high measuring range of up to 10,000 lux.

SENSORS

TWILIGHT SWITCHES

"It's better to light a candle than curse the darkness," were the wise words of Confucius. But that is no help if you are lying inside on the sofa and are too lethargic to stir yourself to switch on the light. The solution to the problem: ESYLUX twilight switches. When the twilight switches are connected to the outdoor lighting, their fine sensor technology ensures that the artificial light is automatically switched on when twilight descends. They thus ensure that the outdoor areas of your building are kept safely illu-

minated, allowing you to carry on watching the latest hit crime drama undisturbed. As well as being more convenient, the twilight switches also guarantee energy efficiency — as soon as daybreak brings enough light into the sky, they switch the lighting off again, automatically and just as unobtrusively.

TWILIGHT SWITCHES

ESYLUX twilight switches ensure automatic lighting of outdoor areas as soon as it gets dark, whether you want to light up a building's façade impressively or ensure that people can find their way around with path lighting. The switches come in a number of well thought-out variants that are ideal for outdoor use either in a sturdy design or as a discreet built-in version, allowing appropriate integration into the

building automation on site. To ensure that brief disturbances of the light conditions—for example from the dipped beam headlights of passing cars—do not confuse the sensors, all twilight switches feature a delay of 60 seconds before switching on or off. They therefore only switch on the light if it is really needed.

SRM-230V RELAY MODULE

Order description

Order no.

EAN no.

230 V ~

IP 20

16 A

- Relay module for extending presence and motion detector switching capacity
- 16 A high-performance relay (tungsten pre-contact), ideal for switching capacitive loads such as electronic ballasts, parallel-compensated fluorescent lamps, compact fluorescent lamps, energy saving lamps
- Holder for mounting on 35 mm DIN rail included

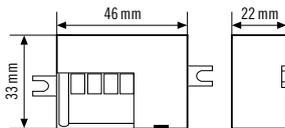

SRM-230V relay module, white

EP10426346

4015120426346

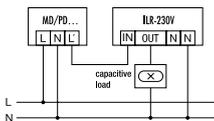

SCALE DRAWING

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz
- Permissible ambient temperature: -10 °C ...+50 °C
- Protection type: IP 20
- Protection class: II
- Installation type: Installation in recessed/surface-mounted boxes/lights, DIN rail, 35 mm
- Approx. dimensions: Height 33 mm x Width 46 mm x Length 22 mm
- Included in delivery: includes holder for DIN rail, 35 mm
- Colour: white

CIRCUIT DIAGRAMS

With electronic ballasts a significantly higher in-rush current compared to the rated current is to be expected. External relays, contactors, an ESYLUX relay module or a current-limiting module should be used for full load.

RC FILTER/SNUBBER

TECHNICAL DATA

- Battery operation: Lithium CR 2032 - 3V (included)
- Approx. dimensions: Height 7 mm x Width 29 mm x Length 56 mm
- Range: overcast/dark approx. 5 - 6 m, direct sunshine approx. 2 - 3 m
- Colour: silver

EXPLANATION OF THE PROGRAM FUNCTIONS

	<p>Continuous lighting ON / OFF Lighting for 12 hours permanently ON / OFF, saves having to additionally install a light switch. *The "Continuous light OFF" (12 h) function is disabled ex works. This function can be enabled during commissioning with remote control</p>		<p>Automatic storage of the current light value Individual storage of the current light value at the push of a button</p>
	<p>Manual switching ON or OFF – replaces button The lighting will remain switched on/off for as long as the detector continues to detect movement. If movement is no longer detected, the preset switch-off delay time will start.</p>		<p>Reset Resets functions and parameters</p>
			<p>Light activation OFF the light can be switched off by remote control at any time and from any function. "Continuous lighting OFF" can be activated during commissioning</p>

- The remote control for quick and precise setting of various parameters (no need to climb a ladder!)
- For wall-mounted detectors of the MD 180i and PD 180i series and ceiling-mounted detectors of the MD, MD-C, PD, PD-C, MD-CE and PD-CE series

- Battery operation: Lithium CR 2032 - 3V (included)
- Approx. dimensions: Height 12 mm x Width 50 mm x Length 105 mm
- Included in delivery: includes wall-mounted holder
- Colour: black

SCALE DRAWING**EXPLANATION OF THE PROGRAM FUNCTIONS**

 <p>Open programming mode The light channel switches on. Whilst in programming mode, the detector's motion sensor is disabled.</p> <p>Close programming mode Settings are stored. The detector will now operate automatically according to the preset values.</p> <p>Note: If the programming mode is not closed by pressing the button, the detector automatically closes the programming mode 2 minutes from pressing a key. All of the functions set up to that point will be adopted.</p>	 <p>Summing function This button can be used to obtain the sum of two values of the same unit (lux/switch-off delay time/switch-off delay for orientation light). Example: 50 lux + 150 lux = 200 lux 1 min. + 5 min. = 6 min.</p>  <p>The channel is switched on permanently during the test operation For each detected movement, regardless of the ambient brightness, the LED comes on for 2 seconds. At the same time a DALI signal is emitted. To exit, press the "Test" button.</p>  <p>Reinstating factory settings Confirmed by flashing red LED on the detector. The presence detector operates according to the potentiometer settings.</p>
 <p>Manual ON / OFF Lighting permanently ON/OFF for 8 hours.</p> <p>8 h ON The lighting remains permanently switched on for 8 hours. In this mode, the LED will flash as follows: 1 second ON and 5 seconds OFF. In this mode, the detector does not respond to a presence. To exit this mode, press the 8 h ON button.</p> <p>8 h OFF The lighting is constantly switched off for 8 hours. 8 h OFF mode is indicated by the LED flashing in a sequence of 1 second ON and 5 seconds OFF. In this mode, the detector does not respond to presence. To exit this mode, press the 8 h OFF button.</p>	 <p>Switching on the orientation light When pressed for the first time, the orientation light will be set to the preset value (lux and switch-off delay time of orientation light). The LED will flash quickly for 2 seconds. The lighting will be switched on in standby mode. The lighting will turn off once the switch-off delay time of the orientation light has elapsed.</p> <p>Switch-off of orientation light When the button is pressed, the detector will exit orientation light mode.</p>  <p>Orientation light switch-off delay times Three switch-on times (5, 15 and 60 minutes) at the push of a button. The addition function can be used.</p>
 <p>Setting of target brightness value (10 lux - 2000 lux) Press the buttons to adjust the brightness set value. The summing function can also be used.</p>	 <p>Light output of the orientation light Orientation light = 10/30/50%. The addition function can be used.</p>
 <p>Automatic storage of the current light value Individually stores the current light value (as switch-on value) at the touch of a button.</p>	 <p>Dimmer function When the buttons are pressed, the detector will start decreasing or increasing the illuminance. If programming mode is not active, the value will not be stored. Switching on refers to switching the detector back on again. When the detector switches off, the changes will not be saved. When the detector is switched on again, the previously saved values (programming mode) are active. If programming mode is active, the set value will be stored.</p>
 <p>Setting the switch-off delay time If no movement is detected, the switch-off delay time starts. 1 min. 10 min. 30 min. 50 min. 50 min. Intermediate values are possible with the "summing function".</p>	
 <p>Switching between fully automatic and semi-automatic mode of light channel Semi-automatic mode, LED comes on for approx. 4 sec. Fully automatic mode, LED flashes 20 x.</p>	 <p>Selecting the channel Channel 1 is always active. Channel 2 is not active/available.</p>

- Remote control for quick and precise setting of various parameters (no need to climb a ladder!)
 - For the following devices: motion detectors RC 130i, RC 230i, RC 280i and automatic light AL S 230i

KNX AND DALI BUS COMPONENTS

KNX AND DALI BUS COMPONENTS

Digital field bus communications are a permanent fixture in the modern building automation toolbox. They not only facilitate the centralised control of components, but also enable particularly accurate adjustment and coordination of a large number of parameters. The result: automation which is even more closely matched to the user's needs. ESYLUX has therefore developed a

great many controls, actuators, interfaces and special modules for KNX and DALI in order to allow the optimum interaction of sensors and end devices and make buildings even more intelligent. This means that users can achieve increased energy efficiency, convenience and safety via a variety of solutions, all from a single source.

SWITCH ACTUATOR DALI SWITCH

MORE THAN JUST LIGHTING

The days when DALI was used solely to control lighting are long past. Nowadays the DALI switch by ESYLUX can also be used to integrate conventional devices into presence-controlled systems and reduce energy consumption on a cross-component basis. Whether in a fully automatic or semi-automatic version, the switch's additional switching channel guarantees efficient automation of all the technology in a room, from ventilation to multimedia devices to air-condi-

tioning units. The multiple digital channels provided by both versions of the switch provide even more flexibility, and mean that up to three different switch-off delay times can be implemented at the same time within the same DALI system.

CONTROL ROOM CONTROLLER BOX

COMPACT SWITCHING CABINET

The room controller box is a compact, decentralised alternative to a large switching cabinet. Together with the associated sensors, the cross-component switch actuators and interfaces within the one small housing ensure that ideal lighting, air and temperature conditions can be created in a room. The method of installation is just as impressive: positioning the

box directly in the room reduces cable runs to a minimum, and simple plug connections avoid time-consuming wiring procedures. The box can be integrated into a KNX building automation system or operated on a stand-alone basis; precise and demand-based configuration of parameters is an easy task thanks to the large number of communication objects.

ROOM AUTOMATION SYSTEM KNX TOP-HAT RAIL MODULE

SCALABLE MODULARITY FOR KNX

The impressively well-thought-out modular principle of the KNX room automation system means that it represents the perfect complement to the KNX sensors by ESYLUX. The correct combination for almost any application can be put together from the comprehensive selection of individual top-hat rail modules, whether for individual rooms or entire buildings, and on a cross-component basis. The result — flexible

concepts tailored to the needs of users. Thanks to their extensive functionality, the modules guarantee optimum connection to and integration of control and end devices and provide a quick route to achieving energy efficiency class A.

HVAC control

with CU-DIN HVAC KNX
(EC10430503, p. 300)

Blind control

with CU-DIN SB 4-CH 10 A KNX
(EC10430374, p. 299)

ADVANTAGES AT A GLANCE:

VERSATILE
Comprehensive selection of KNX modules

FLEXIBLE
Switching and dimmer actuators, special actuators for blinds and HVAC

COMPREHENSIVE
Complete room and building automation

LIGHTING
Continuous lighting control

EXPANDABLE
A system which is scalable at any time

SHADE
Control of shade devices

AIR
Ventilation control

TEMPERATURE
Regulation of heating and cooling elements

UNIVERSAL
From simple threshold value control to the sequential control of entire scenes

CROSS-SYSTEM
Interface modules for cross-system communication

CONTROLS

BUS COMPONENTS

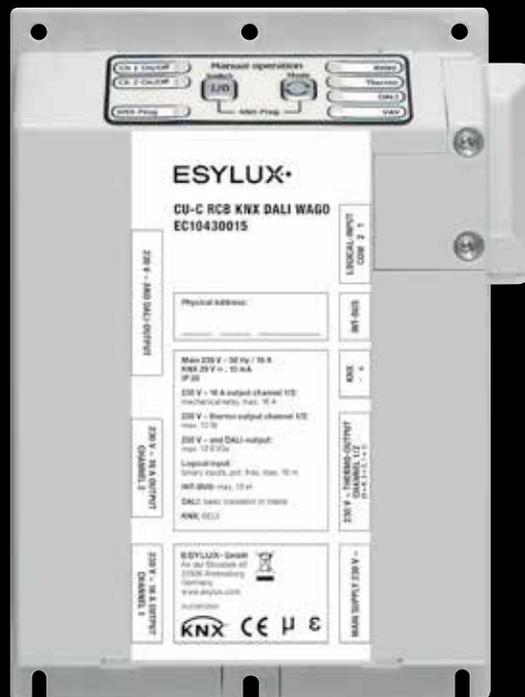

Controls are responsible for organising cross-system communications between sensors, actuators and interfaces for the purpose of building automation. They are implemented as centralised or decentralised solutions to guarantee that processes involving more than one participant run smoothly and that coordinated, cross-component functionality can be achieved by

the automation system. ESYLUX offers its customers flexible and future-proof systems for this purpose which have proven their worth as ingenious solutions for both new-builds and renovations. As a key contributor to information processes and structures, they provide a major boost to energy efficiency, comfort and safety.

TECHNICAL DATA

- Mains voltage: 230 V AC/50 Hz, from KNX bus 29 - 31 V
- Approx. power consumption: < 0.3 W
- Power consumption: 10 mA
- Setting options: remotely with ETS-Software
- Permissible ambient temperature: 5 °C ...+45 °C
- Protection type: IP 20
- Protection class: II
- Installation type: Surface mounting
- Housing material: PC + ABS
- Installation dimension: Installation depth [mm] 40 mm
- Terminal: 2.5 mm² / 1.5 mm²
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: CE, RoHS
- Weight: 0.5 kg
- Number of switching contacts (potential-free contacts): 4
- Number of inputs: 2
- Nominal voltage: 230 V AC/50 Hz
- Rated current: max. 16 A
- Rated current (cos phi = 0.8): max. 16 A
- DC switching capacity (resistive load): 16A / 12V DC
- Switching capacity of light bulbs: 3500 W
- Electrical service life: > 100,000
- Mechanical service life: > 100,000
- Power loss: 4.0 W
- **Channel 1: DALI**
- Interface: switching/dimming
- Contact: Break contact/Make contact
- Switch input: yes
- Switch-off delay time: disabled/30 sec. - 12 hours
- Orientation light: disabled/0 - 50 %, 2 values can be selected
- Switch-off delay time, orientation light: disabled/30 sec. - 12 hours
- Colour: grey

INPUTS AND OUTPUTS

BUS COMPONENTS

Electronic input and output modules form a bridge between the digital and non-digital world as well as ensuring that signals are transmitted rapidly and flexibly, thereby functioning as a vital link between the participants in a bus system. Their insignificant size belies their functional importance, whether for

converting and transmitting decentralised sensor signals, linking intelligent logic functions or accessing entire scenes. The ESYLUX modules demonstrate not only an impressively high level of flexibility, but also extensive options for configuring parameters as well as efficient and reliable operation.

ACTUATORS

BUS COMPONENTS

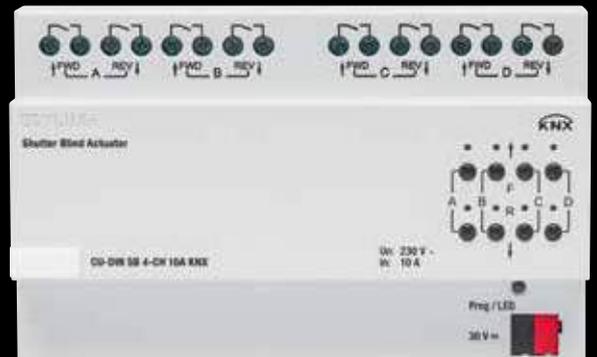

Wherever there is a sensor in a bus system, the actuator is never far away. The digital telegrams received must first be converted into the final control signals before end devices can be triggered. ESYLUX provides a matching range of electrical modules for this purpose which ensure that system commands from

centralised building automation systems or individual field devices give rise to the correct actions. They play an indispensable role in our cross-component complete solutions, whether for switching and dimming lighting or as blind and HVAC drives.

TECHNICAL DATA

- Mains voltage: from KNX bus 29 - 31 V
- Approx. power consumption: < 0.4 W
- Power consumption: 15 mA
- Standby consumption: < 150 mW
- Setting options: remotely with ETS-Software
- Permissible ambient temperature: 0 °C ...+45 °C
- Protection type: IP 20
- Protection class: II
- Installation type: DIN rail, 35 mm
- Installation dimension: Installation depth 65 mm
- Terminal: 0.2 - 6 mm²
- Relative humidity: 5 - 93 %, non-condensing
- Conformity: RoHS, CE
- Number of switching contacts (potential-free contacts): 4
- Nominal voltage: 230 V AC/50 Hz
- Rated current: max. 16 A
- Rated current (cos phi = 0.8): 12 A
- Min. switching capacity: 0.1mA / 1V
- DC switching capacity (resistive load): 16A / 12V DC
- Switching capacity of light bulbs: 3500 W
- Switching capacity of motor: 3000 W
- Switching capacity of inductive transformer: 1800 W
- Switching capacity of fluorescent lamps (parallel compensated): 2000 W
- Switching capacity of fluorescent lamps (uncompensated): 3500 W
- Horizontal pitch (HP): 4
- Power loss: 2.7 W
- Colour: grey

INTERFACES AND GATEWAYS

BUS COMPONENTS

The greater the variety in terms of bus participants and the larger the area covered by the building complex, the more need there is for the correct interfaces. As communicative bridges within the world of devices, interfaces act as interpreters between the different digital languages. The ESYLUX range therefore features a corresponding selection of handy modules in

order to guarantee easy configuration of parameters, flexible control and the ability to transmit information between systems. By ensuring reliable data transmission, they transform the interactions between different types of devices and standards into a uniform building automation system.

POWER SUPPLY

BUS COMPONENTS

An appropriately dimensioned and stable power supply provides a firm foundation for building automation in the 230-V range, and digital communications within bus systems would be impossible without the application of electrical potential. The ESYLUX range therefore features a variety of alternative KNX and

DALI solutions which guarantee that the connected devices will operate reliably. Simple assembly and wiring ensure that installation—whether on a top-hat rail or flush-mounted—is always a straightforward procedure.

230-V ROOM SOLUTION: THE DUODIMPLUS PRESENCE DETECTORS

The DuoDIMplus presence detectors from the Compact series can be used to implement a complete room solution for demand-driven automation in the 230-V range. They measure light to ensure that continuous lighting is provided by two individually controlled rows of lights only when a room is occupied and when required by the level of daylight, meaning that energy use is limited to times when and locations where it is really needed. The "plus" in their name

indicates that this is not all they can do; they also feature a third output which can be used to switch other consumers (such as panel lighting, ventilation or projectors) on and off on a presence-dependent basis.

APPLICATION EXAMPLE PD-C360i/24 DUODIMplus WITH LIGHTING SERIES ALICE/CLARA

The presence detector only activates the two rows of lights when a room is occupied, and controls the rows individually based on the incident daylight. An additional output is available for the semi-automatic or fully automatic switching of additional devices.

— 230 V — 1-10 V

DIGITAL ROOM SOLUTION WITH DALI: DUODALI PRESENCE DETECTORS + DALI SWITCH

Combining the DuoDALI presence detectors with the DALI switch is an ideal way to venture into the world of digital room automation. Thanks to the daylight-dependent continuous lighting control of two rows of lights, the devices automatically deliver the perfect lighting conditions with an excellent level of energy efficiency. They can also be manually adjusted using buttons to accommodate individual needs at all times. The DALI switch's additional switch-

ing channel allows conventional consumers such as ventilation, multimedia devices or air conditioning units to be integrated and controlled, making it possible to automate all the technology in the room with even lower power consumption. Another advantage of the DALI bus is the simple cabling and wiring — and broadcast operation dispenses with complicated software configuration.

APPLICATION EXAMPLE FOR DUODALI PRESENCE DETECTORS + DALI SWITCH

The presence detectors individually regulate two rows of lights via the DALI interface on the basis of incident daylight and limit the lights' activity to times when the room is occupied. The DALI switch can also be used to integrate conventional end devices and switch these devices on a presence-dependent basis.

DECENTRALISED ROOM SOLUTION WITH KNX: THE ROOM CONTROLLER BOX

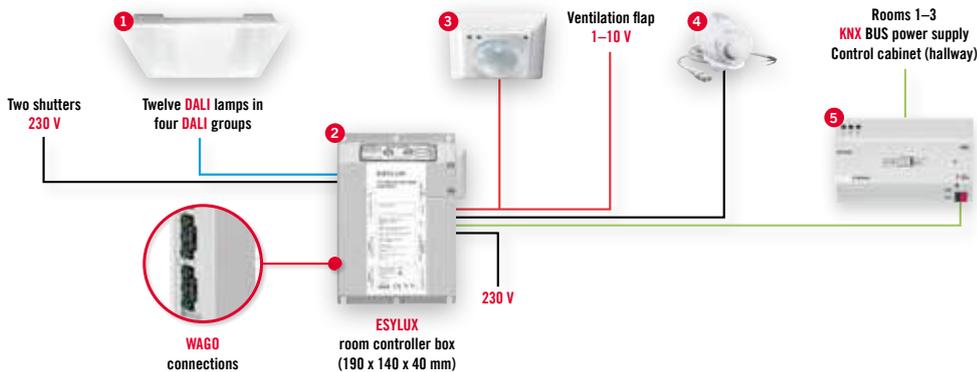

Our room controller box is a room automation solution featuring particularly comprehensive functions for intelligent modernisation of non-residential buildings. Although its appearance resembles that of a compact switch cabinet, in combination with the relevant multi-sensor technology it can achieve finely-tuned and KNX-based automation of all the technology in a room.* In order to do so, its features include binary inputs, a KNX-to-DALI gateway for lighting

and several special outputs for the demand-driven control of heating, ventilation and air conditioning units. Positioning the box directly in the room reduces cable runs to a minimum, and all other devices are connected using a simple plug-and-play principle.

*We can preconfigure the box for you and your building if necessary. Please call our hotline for individual advice. You can find the number on the back of this brochure.

APPLICATION EXAMPLE FOR THE ROOM CONTROLLER BOX

The room controller box and multi-sensors work together to control all the technology in the room automatically and on a demand-driven basis. Decentralised positioning directly in the room and simple plug-in connections ensure that the installation process is straightforward.

SCALABLE MODULARITY FOR THE KNX BUILDING: THE ROOM AUTOMATION SYSTEM

A building which is fully equipped for KNX needs equipment which is as comprehensive as it is flexible, both for individual rooms and for the purpose of building-wide automation. The ESYLUX room automation system meets this challenge. The extensive range of top-hat rail modules offers the correct combination for almost any application, with switching and dimming actuators and modules which

guarantee convenient interface communications or a reliable power supply. By using these components together with our KNX sensors, users can assemble complete and tailor-made solutions for virtually every situation.

APPLICATION EXAMPLE FOR ROOM AUTOMATION SYSTEM

Complete and personalised solutions can be compiled by using our KNX sensors together with the room automation system modules. The traditional switch cabinet functions as a central interface, and—as is invariably the case for KNX—the options for configuring parameters are extremely varied in order to meet every user's needs.

PLUG-AND-PLAY FOR AN INTELLIGENT LIGHTING SYSTEM: THE NOVA QUADRO SETS

The Quadro sets form the basis for a comprehensive and extendible system solution which can be used to control not just lighting, but also other devices in a room on an energy-efficient basis. Automatic presence-dependent and daylight-dependent continuous light control is achieved by the various combinations of master and slave lights thanks to the use of integrated sensors, and the highest configuration level even features biologically effective lighting. For

installations on a larger scale, the sets can be extended by up to 100 lights using the four DALI interfaces in the master lights; alternatively, several sets can be combined with each other. Another practical option involves integrating DALI switch so that conventional end devices are incorporated and can be switched on a presence-dependent basis.

APPLICATION EXAMPLE OF ALICE QUADRO SET 3K / 4K IN A SINGLE ROOM.

The master lights guarantee presence-dependent and daylight-dependent continuous lighting control of the entire lighting system. All of the lights in the set can optionally be fitted with their own light sensor for demand-driven lighting in every area.

APPLICATION EXAMPLE OF ALICE QUADRO SET WITH HVAC CONTROLS.

In addition to lighting control, use of the DALI switch once again means that conventional end devices can be integrated and switched on a presence-dependent basis, either on a fully automatic basis or by using a button.

— 230 V — 48 V — DALI-BUS

The highest configuration level of this system solution is equipped with our SymbiLogic technology. This generates biologically effective light which changes in brightness and colour temperature over the course of the day, boosting the mood, concentration and health of a building's users. SymbiLogic uses the PIR and light sensors integrated into the lights for this purpose, automatically providing energy efficiency.

HIGH-QUALITY LIGHT FOR THE MOST DEMANDING OF VISUAL TASKS:
RECESSED CEILING LIGHTS NOVA & CLARA
STANDARD DESIGNS

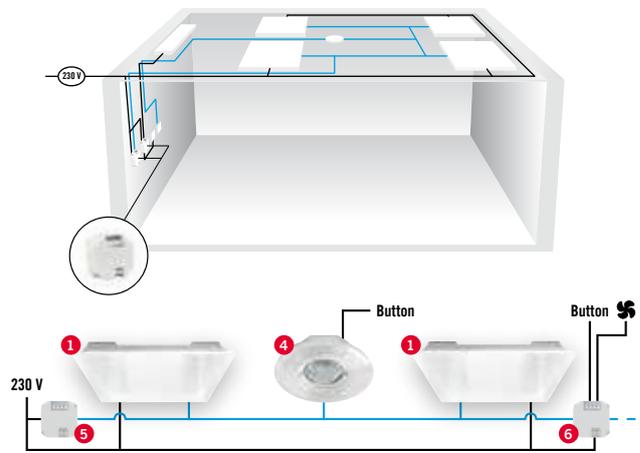

The lights in the CLARA series and the standard designs in the ALICE series represent optimum solutions for grid layouts in suspended ceilings. Both are genuine visual alternatives which form an energy-efficient and durable complete system and are available with different high-quality diffuser variants. The best news: they are

compatible with all common operating technologies. This means that they can be combined with all our automation solutions as required, from simple switching operations or 1–10 V dimming to digital DALI networking. Optional Linect plug-in connectors ensure that installation is always a straightforward procedure.

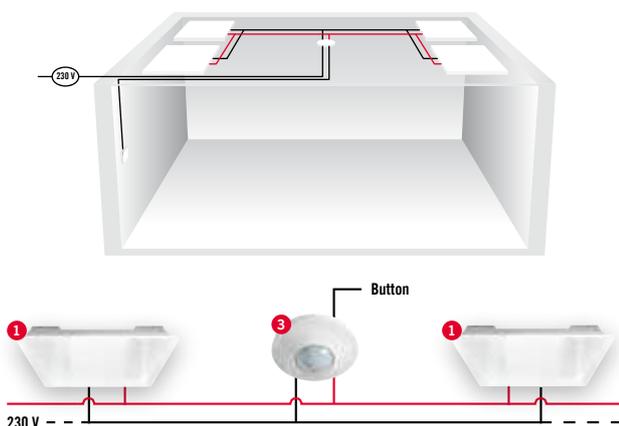

APPLICATION EXAMPLE ON/OFF.

The perfect entry-level solution for energy-efficient lighting control: a 230-V presence detector automatically switches the light on and off, and a button input allows manual intervention as and when necessary.

APPLICATION EXAMPLE FOR A DALI INSTALLATION

A separate 1–10-V control cable allows the illumination level in the 230-V range to be adjusted precisely to a user's needs, on the basis of either automatic continuous light control or manual dimming.

APPLICATION EXAMPLE FOR 1–10-V DIMMING

The DALI presence detector provides digitally regulated continuous light control, and the DALI switch means that conventional end devices can be switched automatically on a presence-dependent basis.

NETWORKED LIGHT MANAGEMENT IN OUTDOOR SPACES: THE ALVA SERIES

The ALVA series is about more than just robust and attractive lighting for outdoor spaces. The wall or house number lights and bollard lights in the series can optionally also be fitted with high-quality motion detectors, thereby giving the lighting system the little bit of intelligence it needs. The bollard lights are also available with an integrated DALI electronic ballast so that they can easily be integrated into a light management system and used to design personal-

ised light concepts. If the lights in the series are equipped with integrated motion detectors, they can even control entire groups of lights, ensuring presence-dependent communal switching, pleasant orientation lighting or the automatic activation of artificial light when darkness falls, for example.

APPLICATION EXAMPLE FOR ALVA DALI AUTOMATION.

The networking of DALI-enabled lights makes it possible to design intelligent scenes for gardens, car parks and pathways. The additional integration of motion detectors means that the entire system can be automatically controlled, on a presence-dependent or twilight-dependent basis or for pleasant orientation lighting. The DALI switch can again be used for the integration and presence-dependent switching of conventional end devices.

INDIVIDUAL OFFICE

(usage type 1 in accordance with ENEC 2014)

DEFINITION OF TASK

In an office, lighting should be automatically controlled according to requirements, i.e. activated by natural light and by the presence of people. It should also be possible to switch the lighting manually at the touch of a button.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. The lighting can also be manually switched on or off at the touch of a button.

PRODUCT RECOMMENDATION

PD-C360i/8 - master (p. 83)

- Recessed mounting IP 20
- Surface mounting IP 20/IP 54 with accessories
- Recessed ceiling mounting IP 20 with accessories

1 x

or

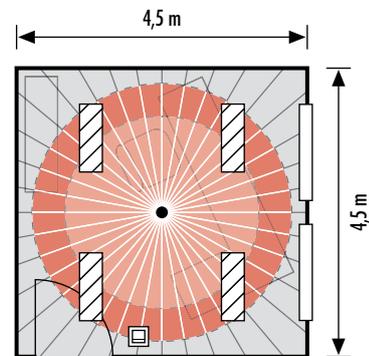

PD-C360i/8 mini - master (p. 127)

- For individual settings, use the remote control Mobil-PDi/MDi.
- Recessed ceiling mounting IP 55

1 x

PLANNING EXAMPLE

Square room, area approx. 20 m²,
ceiling height of 3 m.

- Workspace PD-C360i/8
- Workspace PD-C360i/8 mini
- Passage area

ACCESSORIES

Mobil-PDi/MDi (service remote control, p. 265)

optional

The detectors can be set in just 15 seconds according to customer requirements (no need for a ladder). There is also the option of switching the lighting on or off at any time without leaving the desk.

Mobil-RCi-M (end-user remote control, p. 264)

optional

Only PD-C360i/8 mini - Master; there is also the option of switching the lighting on or off at any time without leaving the desk.

SETTINGS

Immediate operability due to default settings

Working area
light value
(approx. 400 lux)

Switch-off delay time
5 minutes

Fully automatic

Individual settings by remote control Mobil-PDi/MDi

 Enter programming mode

 Store current light value as switch-on value

 or  Select from specified preset light values

 Adjust switch-off delay time for light channel to 10 min.

 Exit programming mode

GROUP OFFICE

(2–6 workstations, usage type 2 in accordance with ENEC2014)

DEFINITION OF TASK

In an open-plan office, lighting should be automatically adjusted according to requirements, i.e. activated by natural light and by the presence of people. Lighting in each work area should be switched on/off individually. Walkways should be regarded as separate from working areas. Each work area is equipped with continuous lighting control and the passage area is equipped with orientation lighting as basic lighting (10%).

RECOMMENDED SOLUTION

Each work area is equipped with the selected presence detector which automatically controls the lighting depending on natural light. In addition, the light values can be adjusted at any time by means of a button. The walkway is switched on automatically by means of a master/slave combination. The orientation lighting guarantees basic lighting of 10%. To prevent the hallway lighting from switching on when it is not required, the field of detection can be limited using the supplied covering clips/lens masks. The maximum in-rush current must be taken into account for channel 2 and an ESYLUX relay or current-limiting module used.

RECOMMENDED PRODUCTS

PD-C360i/8 DIM plus (p. 93) 7 x

PD-C360/8 slave (p. 100) 1 x

- Recessed mounting IP 20
- Surface mounting IP 20/IP 54 with accessories
- Recessed ceiling mounting IP 20 with accessories

or

PD-C360i/8 mini DIM (p. 130) 7 x

For individual settings, use the remote control Mobil-PDi/plus.

PD-C360/8 mini slave (p. 132) 1 x

- Recessed ceiling mounting IP 55

ACCESSORIES

Mobil-PDi/plus (service remote control, p. 267) optional

The detectors can be set in just 15 seconds according to customer requirements (no need for a ladder). There is also the option of switching the lighting on or off at any time without leaving the desk.

Mobil-PDi/User (end-user remote control, p. 268) optional

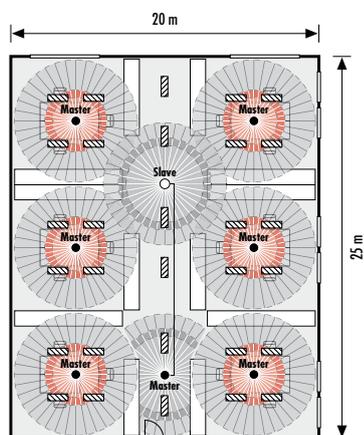

There is the option of switching the lighting on or off at any time without leaving the desk.

Mobil-RCi-M (end-user remote control, p. 264) optional

Only PD-C360i/8 mini - Master; there is also the option of switching the lighting on or off at any time without leaving the desk.

PLANNING EXAMPLE

Large rectangular office, 6 workspaces, separated by one corridor, area approximately 500 m², ceiling height of 3 m.

- Workspace PD-C360i/8 DIMplus
- Workspace PD-C360i/8 mini DIM
- Head-on to detector PD-C360i/8 DIMplus
- Head-on to detector PD-C360i/8 mini DIM
- Passage area

SETTINGS

Immediate operability due to default settings

Working area light value (approx. 400 lux)

Switch-off delay time 5 minutes

Fully automatic

Individual configuration using remote control Mobil-PDi/plus

- Enter programming mode
- Store current light value as switch-on value
- Select from specified preset light values
- Adjust switch-off delay time for light channel to 10 min.
- Activate orientation lighting
- Adjust switch-off delay time for orientation lighting to 10 min.
- Exit programming mode

CONFERENCE ROOMS

(conferences, meetings, seminars, usage type 4 in accordance with ENEC 2014)

DEFINITION OF TASK

In a conference room, lighting should be automatically controlled according to requirements, i.e. activated by daylight and by the presence of people. For specific presentations, the lighting should be set to saved light "scenes". The air conditioning should be automatically switched on if persons are detected.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. Individual light "scenes" can be stored with a remote control and called up at the touch of a button. Through the presence channel, if persons are detected, the air conditioning is immediately switched on and time-controlled by the separately adjustable time setting. The maximum in-rush current must be taken into account for channel 2 and an ESYLUX relay or current-limiting module used.

PRODUCT RECOMMENDATION

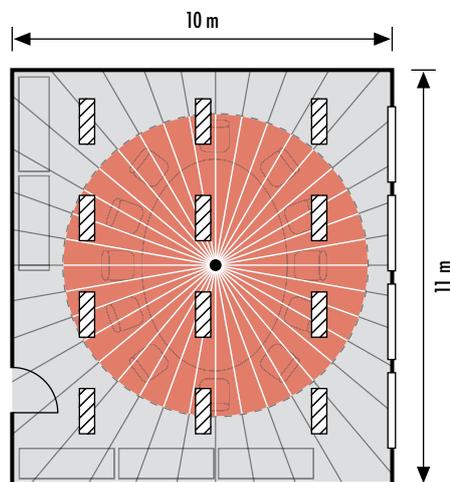

PD-C360i/24 DIMplus (p. 95/96)

1 x

- Recessed mounting IP 20
- Surface mounting IP 20/IP 54 with accessories
- Recessed ceiling mounting IP 20 with accessories

PLANNING EXAMPLE

Roughly rectangular conference room, area approx. 110 m², ceiling height of 3 m.

- Work area
- Passage area

ACCESSORIES

Mobil-PDi/plus (service remote control, p. 267)

optional

The detector can be set in just 15 seconds according to customer requirements (no need for a ladder). There is also the option of dimming or controlling the lighting at any time without leaving the desk.

Mobil-PDi/User (end-user remote control, p. 268)

optional

There is also the option of dimming or controlling the lighting at any time without leaving the desk. Individual light "scenes" can be called up.

SETTINGS

Immediate operability due to default settings

Working area light value (approx. 400 lux)

Switch-off delay time 5 minutes

Switch-off delay time HVAC 60 min.

Fully automatic

Individual configuration using remote control Mobil-PDi/User

Manual dimming of lighting to required light value

Temporary storage of required light value

Storage of required light scene

Activation of stored light scene

SELF-SERVICE HALL

(ATMs, usage type 5 in accordance with ENEC 2014)

DEFINITION OF TASK

In the self-service area of a bank the lighting should be automatically adjusted according to requirements, i.e. activated by natural light and the presence of people. Outside of business hours there should always be basic lighting of 10%. When a person enters the room, the lighting should be increased to 100%.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on automatically when the brightness level falls below the light intensity value and if movement is detected. The presence detector should be positioned so that the close-up range is used. The orientation light must be permanently switched on via the remote control. If the ambient lighting falls below the light value, the lighting switches on and remains at 10%; if a person enters the room, the lighting adjusts to 100%.

PRODUCT RECOMMENDATION

PD-C360i/12 mini DIM (p. 131)

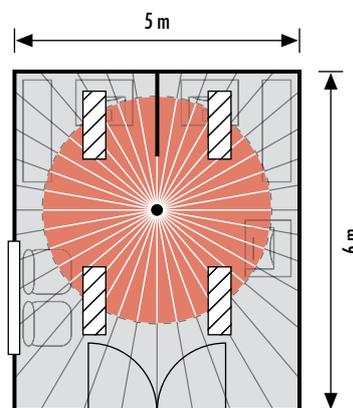

1 x

For individual configuration, use the remote control Mobil-PDi/plus.

- Recessed ceiling mounting IP 55

PLANNING EXAMPLE

Roughly rectangular room, area approx. 30 m², ceiling height of 3 m.

- Work area
- Passage area

ACCESSORIES

Mobil-PDi/plus (service remote control, p. 267)

optional

The detector can be set in just 15 seconds according to customer requirements (no need for a ladder). The orientation light must be permanently switched on via the remote control. There is also the option of dimming or controlling the lighting at any time.

Mobil-RCi-M (end-user remote control, p. 264)

optional

It is possible to switch the lighting on or off at any time.

SETTINGS

Immediate operability due to default settings

Working area light value

(approx. 400 lux)

Switch-off delay time
5 minutes

Fully automatic

Individual configuration using remote control Mobil-PDi/plus

Enter programming mode

Store current light value as switch-on value

Select from specified preset light values

Adjust switch-off delay time for light channel to 10 min.

Activate orientation lighting

Exit programming mode

CLASSROOMS

(schools, usage type 8 in accordance with ENEC 2014)

DEFINITION OF TASK

In a classroom, lighting should be automatically regulated to a constant light level according to requirements, i.e. activated by daylight and by the presence of people. The window and wall lighting strips should be switched and controlled independently of each other. The strip lights should be switched on manually via a button while the panel lighting (i.e. for a white/blackboard) is switched separately.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. Both lighting zones are set to the required light level on the basis of continuous lighting control, and regulated separately depending on natural light levels and presence. As light measurement is performed using two channels, if the natural light increases then the lighting closer to the window will be controlled earlier than the lighting closer to the wall. The whiteboard/blackboard lighting works on a presence-dependent basis. Both the whiteboard/blackboard lighting and the two strip lights can be switched on or off separately using a button.

PRODUCT RECOMMENDATION

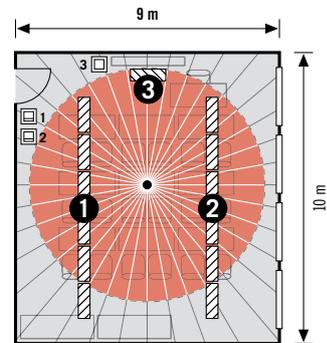

PD-C360i/24 DUODIMplus (p. 97/98)

1 x

- (FM and SM version)

PLANNING EXAMPLE

Roughly rectangular room, area approx. 90 m², ceiling height of 3 m.

- Work area
- Passage area
- 1 Lighting, wall side
- 2 Lighting, bank of windows
- 3 Whiteboard/blackboard lighting

ACCESSORIES

Mobil-PDi/plus (service remote control, p. 267)

optional

The detector can be set in just 15 seconds according to customer requirements (no need for a ladder). There is also the option of dimming or controlling the lighting at any time without leaving the desk.

Mobil-PDi/User (end-user remote control, p. 268)

optional

There is also the option of dimming or controlling the lighting at any time without leaving the desk. Individual light "scenes" can be called up.

SETTINGS

Immediate operability due to default settings

Working area light value (approx. 400 lux)

Switch-off delay time 5 minutes

 Store current light value as switch-on value
or  Select from specified preset light values

 Adjust switch-off delay time for light channel to 10 min.

 Exit programming mode

WC AND SANITARY FACILITIES

(in non-residential buildings, usage type 16 in accordance with ENEV 2014)

DEFINITION OF TASK

In toilet facilities, lighting should be automatically controlled according to requirements, i.e. activated by the presence of people.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on if movement is detected in the vestibule. In this example, the ambient lighting is constantly below the light value as there is no natural lighting. The toilet area is fully covered by a master detector and two slave detectors. The ventilation is switched on, depending on presence, via a floating contact (HVAC). When the room has been vacated and the set time has elapsed, the lighting and ventilation are switched off.

PRODUCT RECOMMENDATION

PD-C360i/8plus (p. 84)

2x

PD-C360i/8 slave (p. 100)

2x

- Recessed mounting IP 20
- Surface mounting IP 20/IP 54 with accessories
- Recessed ceiling mounting IP 20 with accessories

ACCESSORIES

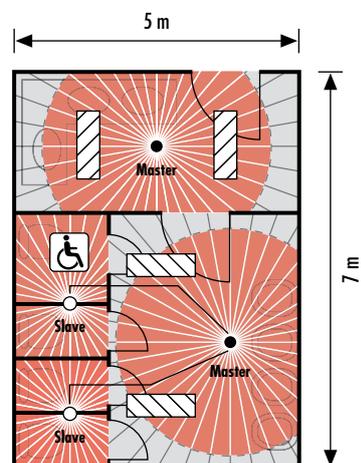

Mobil-PDi/MDi (service remote control, p. 265)

optional

The detectors can be set in just 15 seconds according to customer requirements (no need for a ladder).

PLANNING EXAMPLE

Rectangular room, separate individual areas, area approx. 35 m², ceiling height of 3 m.

- Work area
- Passage area

SETTINGS

Immediate operability due to default settings

Light value (approx. 400 lux)

Switch-off delay time 5 minutes

Switch-off delay time HVAC 60 min.

Fully automatic

Individual configuration using remote control Mobil-PDi/MDi

- Enter programming mode
- Adjust switch-off delay time for HVAC channel to 15 min.
- Exit programming mode

CIRCULATION AREAS

(stairwells, usage type 19 in accordance with ENEC 2014)

DEFINITION OF TASK

For safety reasons and convenience, lighting in a stairwell should be automatically controlled based on demand, i.e. activated by the presence of people.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on if movement is detected. In this example, the ambient lighting is constantly below the light value as there is no natural lighting. Due to the field of detection, the ceiling-mounted motion detectors can also detect movement downstairs. Through the installation of a detector with an acoustic sensor, the detector is also triggered by noise. If the detector switches off the lighting after the set time has elapsed (no movement or noise), the lighting can be immediately re-activated, e.g. by calling out (making a noise), within max. 8 seconds. Infinitely variable sensitivity to noise. The acoustic sensor will only be enabled if the detector is activated first, either by movement or by switching on manually (button or remote control). This prevents noises from outside the monitored area affecting operation.

PRODUCT RECOMMENDATION

MD-C360i/8 MIC (p. 77)

4 x

- Recessed mounting IP 20

ARCHIVE/LIBRARY

(usage type 20/28 in accordance with ENEC 2014)

DEFINITION OF TASK

In a library, lighting should be automatically controlled according to requirements, i.e. automatically activated by daylight and by the presence of people. The individual aisles and seating areas should maintain basic lighting of 10% for approx. one hour. Lighting in the entrance area should only switch on according to requirements.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting automatically switches on when the brightness level falls below the light value and if movement is detected. A master presence detector is installed in each aisle and above each seating arrangement. The orientation light can be programmed with the remote control. If the ambient lighting falls below the light value and movement is detected, the lighting switches to 100%. If no further movement is detected, the lighting for the aisles and seating areas switches to a basic lighting of 10% after one hour. After 1 hour (without movement), the lighting switches off completely.

PRODUCT RECOMMENDATION

PD-C360i/8 mini DIM (p. 130)

9x

For individual settings, use the remote control Mobil-PDi/plus.

- Recessed ceiling mounting IP 55

ACCESSORIES

Mobil-PDi/plus (service remote control, p. 267)

optional

The detector can be set in just 15 seconds according to customer requirements (no need for a ladder). The orientation light must be permanently switched on via the remote control. There is also the option of dimming or controlling the lighting at any time.

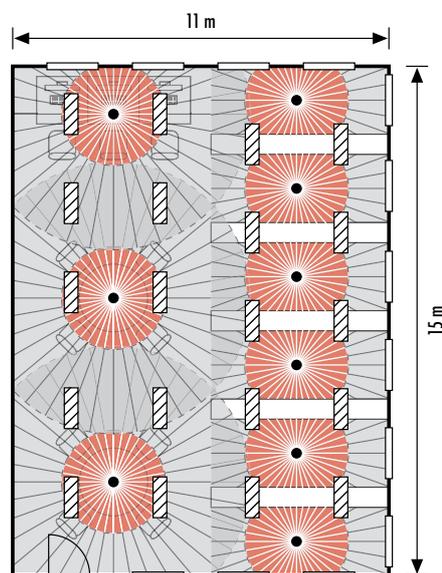

Mobil-RCi-M (end-user remote control, p. 264)

optional

It is possible to switch the lighting on or off at any time.

PLANNING EXAMPLE

Rectangular room, 3 reading areas, 6 aisles, area approx. 165 m², ceiling height of 3 m.

- Work area
- Passage area

SETTINGS

Immediate operability due to default settings

Working area light value (approx. 400 lux)

Switch-off delay time 5 minutes

Fully automatic

Individual configuration using remote control Mobil-PDi/plus

- Enter programming mode
- Store current light value as switch-on value
- or Select from specified preset light values
- Adjust switch-off delay time for light channel to 15 min.
- Activate orientation lighting
- Exit programming mode

SPORTS HALL

(usage type 31 in accordance with ENEC 2014)

DEFINITION OF TASK

In a sports hall, lighting should be automatically controlled according to requirements, i.e. activated by daylight and by the presence of people. Each section of the hall to be switched independently.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. A presence detector master and slave is installed in each section of hall. Due to their large field of detection, each half of the hall is detected separately.

PRODUCT RECOMMENDATION

PD-C360i/24plus (p. 88)

PD-C360i/24 slave (p. 101)

2 x

- Recessed mounting IP 20
- Surface mounting IP 20/IP 54 with accessories
- Recessed ceiling mounting IP 20 with accessories

PLANNING EXAMPLE

Rectangular sports hall, area approx. 1150 m², ceiling height of 5–10 m.

-  Passage area
-  Lighting area 1
-  Lighting area 2

ACCESSORIES

Mobil-PDi/MDi (service remote control, p. 265)

optional

The detectors can be set in just 15 seconds according to customer requirements (no need for a ladder).

Basket guard (p. 259)

optional

Basket guards are used to protect the presence detectors without limiting the field of detection.

SETTINGS

Immediate operability due to default settings

Light value (approx. 400 lux)

Switch-off delay time 5 minutes

Fully automatic

Individual configuration using remote control Mobil-PDi/MDi

-  Enter programming mode
-  Store current light value as switch-on value
- or  Select from specified preset light values
-  Adjust switch-off delay time for light channel to 10 min.
-  Exit programming mode

CAR PARKS

(office and private use, usage type 32 in accordance with ENEC 2014)

DEFINITION OF TASK

In an underground car park, lighting should be automatically controlled based on demand, i.e. activated by the presence of people. It should be ensured that the individual areas are activated on entering.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on automatically if movement is detected. In this example, the ambient lighting is constantly below the light value as there is no natural lighting. The detectors are connected individually and the light output is fed to a power contactor so that the entire area lighting system can be switched on.

PRODUCT RECOMMENDATION

- Ⓜ Exit programming mode

CORRIDORS

(hospital corridor, usage type 40 in accordance with ENEC 2014)

DEFINITION OF TASK

In a hospital corridor, lighting should be automatically controlled based on demand, i.e. dependent on natural light and the presence of people. Partial lighting should always be ensured in the corridor in the event of a phase failing.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. The presence detector is operated with any phase (e.g. L1). The lights in the hallway are divided between the two remaining phases (L2 and L3). In the event of failure of a single phase which powers a single light group (e.g. L2), partial lighting is still ensured in the hallway (L3). If phase L1 fails and there is no power to the presence detector, the detector contacts close. As these are floating break contacts, the lighting remains switched on. The maximum in-rush current must be taken into account for both contacts and an ESYLUX current-limiting module used.

WAREHOUSES

(usage type 42 in accordance with ENEC 2014)

DEFINITION OF TASK

In a high bay warehouse, lighting should be automatically controlled based on demand, i.e. dependent on natural light and the presence of people. The lighting in the individual aisles should then only switch on when each aisle is entered. The main aisle is regarded separately. Orientation lighting of 20% is required.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. The master detectors should be mounted in the darkest area of the aisle. To ensure that movement in the main aisle will not switch on lighting in the side aisles, lens masks should be used.

DETACHED HOUSE

Outdoor lighting control

DEFINITION OF TASK

Outdoor house lighting should be automatically controlled based on demand, i.e. dependent on natural light and the presence of people.

RECOMMENDED SOLUTION

Through the use of the selected presence detector, the lighting automatically switches on when the brightness level falls below the light value and if movement is detected. Reliable detection operates in the outdoor area and the general outside lighting is switched on. For garden parties, the detectors can be switched on or off with the remote control for short periods (max. 12 hours).

FRONT OF HOUSE

Outdoor lighting control

DEFINITION OF TASK

Outdoor semi-detached house lighting should be automatically controlled according to requirements, i.e. activated by natural light and by the presence of people. Both entrance areas should be covered separately by the motion detectors.

RECOMMENDED SOLUTION

Through the use of the selected motion detector, the lighting switches on when the brightness level falls below the light intensity value and if movement is detected. The motion detectors are installed on the front of each house. Due to the dimensions of the plot, two operating ranges should be configured. The selected motion detector has 2 x 100° (total 200°) fields of detection which can be configured separately. These can each be set in 3 operating distance levels. *For garden parties, the detector can be switched on or off for short periods (max. 12 hours) using a remote control.*

PRODUCT RECOMMENDATION

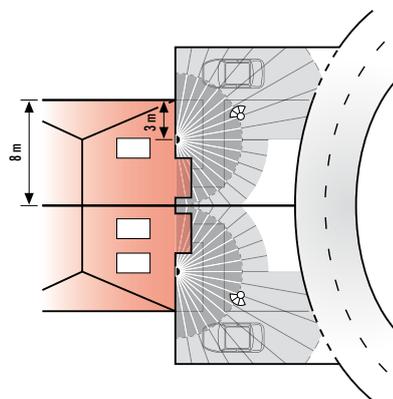

MD-W200i (p. 157)

- IP 55 wall mounting

 <p>RANGE ADJUSTMENT Alter the range for the left-hand and right-hand sensor fields by mechanically adjusting the internal lens mask</p>	 <p>SURFACE MOUNTING With surface-mounted line entry</p>

SIMPLE AND FAST ASSEMBLY

With the double line entry, the large terminal compartment, the plug-in terminals and simple attachment of the cover cap, assembly is quick and easy

Acoustic sensor	If the detector switches off the lighting after the set time has elapsed, the lighting can be immediately re-activated, e.g. by calling out (making a noise), within max. 8 seconds. Infinitely variable sensitivity to noise. The acoustic sensor will only be enabled if the detector is activated first, either by movement or by switching on manually (button or remote control). This prevents noises from outside the monitored area affecting operation.
Motion detectors	Motion detectors respond to larger movements, which is why they are intended more for outdoor use. However, they can also be installed indoors. Like presence detectors, motion detectors also have a demand and comfort setting, but they are only suitable for premises with no or only very limited natural light and/or for short-term use. They ensure safety in dark areas, particularly walkways. Energy can also be saved when it comes to motion detectors, although the saving is not as high as for presence detectors. The switch-on criteria for motion detectors are as follows: If the ambient brightness is below the light value set on the detector and motion is registered, the motion detector switches on the light. In contrast to the presence detector, a motion detector does not feature permanent photometry, i.e. photometry is no longer enabled once the light is switched on. When the light is switched on, the motion detector would remain switched on until no further movement is detected.
"Blue mode" technology	The "blue mode" technology is the ESYLUX programming mode for our presence and motion detectors. With this technology, we have facilitated switching load-free commissioning and programming of ESYLUX presence and motion detectors, thereby significantly increasing the service life of the connected lights and relays. The programming mode is visualised with a blue LED built into the detector that displays each program step clearly and comprehensibly.
KNX bus system; TP (2-wire BUS)	KNX is a field bus for building automation and controls heating plants, lighting, blinds, ventilation and safety technology holistically. The line connects sensors and actuators and in most cases supplies the bus devices with energy. Compared to conventional installation technology, KNX allows a significant reduction of the cabling required for a decentralized arrangement of bus devices. The KNX specification has been included in the European standard EN 50090; this standard has also been accepted as international standard ISO/IEC 14543-3.
DALI	DALI stands for "Digital Addressable Lighting Interface" and was introduced by the lighting industry as an interface standard for actuating electronic ballasts. DALI allows for flexible lighting management as a single room solution; it is not a bus system for building control, but connection to KNX via a certified interface is possible. Some presence detector models act as a control unit with an integrated interface supply.
Twilight switch	A twilight switch is nothing other than a light sensor. The twilight switch features permanent photometry and switches the lights on when the light value falls below the preset value.
Diode	Diodes are electrical components that work like a valve. In a wiring drawing, the anode is the arrow, the cathode the bar. Current can "flow" from the anode to the cathode, but not in the other direction. There are diodes of different sizes, depending on the intended purpose.
Double diaphragm entry fitting	Double-diaphragm cable entry IP6X. Special plastic (flexible and temperature-resistant). Secure mounting without locknut, like an integrated diaphragm seal.
DSI	Digital serial interface - for digital control of electronic control gear with a DSI (serial port, asynchronous interface).

Electronic ballasts	<p>Only electronic ballasts are mainly used now for fluorescent lamps in modern lighting systems. In contrast to conventional ballasts, electronic ballasts have significant advantages in that far less power is lost and the light yield is significantly higher with lower heat emission. However, the electronic ballasts not only have benefits. An inrush current considerably higher than the rated current, depending on the type, occurs in electronic ballasts. In addition, with electronic ballast switching, all lights switch on simultaneously. This is due to the fact that the capacitors contained in the electronic ballasts trigger a very high transient current pulse. The inrush currents differ greatly depending on the manufacturer of the electronic ballast and no general statements can be made in this respect. In addition, the structure of the individual electronic ballasts differs greatly and the inrush currents are therefore very different, even where the specified rated currents are the same. In addition, the inrush current is also dependent on other system-specific factors, such as the type of power grid, the different internal resistances – soft- or hard-switching is referred to in this respect.</p> <p>Soft-switching: High internal resistance, reduced inrush currents Hard-switching: Low internal resistance, high inrush currents</p> <p>When planning, it is therefore not possible to clarify how many electronic ballasts can be connected to presence and motion detectors or to switching devices in general. The maximum inrush currents specified by us must therefore be taken into account during project planning and the specification for the maximum number of the electronic ballasts refers exclusively to references and are approximate values. In order to ensure a long service life of the switching devices we recommend the use of a current limiting module.</p>
Field of detection	<p>The field of detection defines the surveillance zone in which the motion or presence detectors register a change. ESYLUX motion and presence detectors feature excellent large fields of detection. If the field of detection of a detector for the room or area to be monitored is inadequate, it can be expanded by connecting several detectors (motion detectors) in parallel or with a master-slave circuit (presence detector).</p>
ETS	<p>The ETS (Engineering Tool Software) is the unique non manufacturer-specific tool software for planning and configuring intelligent home and building system technology with the KNX system.</p> <p>Features:</p> <ul style="list-style-type: none"> - A single tool for any KNX project and for any KNX-certified device worldwide - This installation tool is a de facto part of the KNX standard - All product databases with certified products from KNX manufacturers can be imported into ETS - Together with ETS, the KNX system offers simple non manufacturer-specific software for all planners and installation companies
In-rush currents	<p>With electronic ballasts and multi-ballasts, a significantly higher in-rush current compared to the rated current is to be expected. External relays, contactors, an ESYLUX relay module or a current-limiting module should be used for full load.</p>
Energy efficiency classes	<p>To assess the energy efficiency of buildings, four energy efficiency classes (A - D) have been introduced . Buildings are assigned one of these classes depending on the building automation system installed. The cost-savings potential for thermal and electrical energy can be calculated for each class, according to the type of building and how the building is used.</p>
Frequency	<p>The number of periods per second is referred to as the frequency. The unit of frequency is Hertz (symbol: Hz). The shorter the period, the greater the frequency; it is the inverse of the period. Alternating current from the power grid has 50 periods per second in Europe, i.e. 50 Hertz.</p>

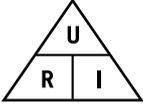

Direct current	<p>DC stands for "direct current".</p> <p>An electrical current whose strength and direction does not change is known as direct current (DIN 40 110-1). The individual partial voltages add up to a total voltage.</p>
BA	<p>BA is the abbreviation for building automation. The entirety of the monitoring, control, regulating and optimisation equipment in buildings is collectively referred to as building automation. BA includes products, software and technical services for automatic control and regulation, monitoring and optimisation, and management that can be used to operate building equipment in an energy efficient manner, economically and safely. In order to ensure that a distinction can be made between different buildings in terms of the BA systems installed, BA energy efficiency classes are defined in the standard DIN EN 15232.</p>
BM	<p>BA is the abbreviation for building management. The acronym GMS for building management system is also commonly used. Building management refers collectively to the services associated with the management, operation and monitoring of buildings (including equipment and installations). Building management can form part of facility management.</p>
GST 18i - supply line	<p>Special 3-pin supply line, coded and marked for applications with firing voltages up to 5 kV. The components meet the requirements of DIN EN 60 598-1 (VDE 0711, para. 10.2 ff).</p>
Semi-automatic mode	<p>Semi-automatic mode is a setting for presence detectors. In this mode, which can be switched on using the dip switch on the detector itself or by remote control, the detector can be manually overridden at any time. The lighting can therefore be switched on or off with a switch, for example.</p>
High-performance relay (tungsten feed contact)	<p>This relay is suitable for switching capacitive loads such as:</p> <ul style="list-style-type: none"> - Electronic ballasts - Parallel-compensated fluorescent lamps - Compact fluorescent lamps - Energy saving lights
HVAC	<p>Abbreviation for heating, ventilation, air-conditioning.</p>
Hysteresis	<p>Hysteresis describes a system behaviour in which the output variable depends not only on the input variable, but also on the previous status of the output variable. The system can adopt a number of statuses for the same input variable. Hysteresis can be understood as a certain "dead range" around the threshold value within which the actual value must change in order to trigger a switch-over to the opposite status. In simple terms, a presence detector switches the artificial light off as part of the mixed photometry when a value of 700 lux is reached, for example, and does not switch the light on again until the value drops below 500 lux, for example, corresponding to a hysteresis of 200 lux.</p>

<p>Inductance/capacitance</p>	<p>Inductance, also known as self-inductance or self-induction L, is a property of electrical circuits, and in particular of coils. The self-inductance of a circuit correlates the rate of change of the electric current i with the electric voltage U in the following formula:</p> $u = L \cdot di/d$ <p>The electric capacitance is a physical variable used in electrostatics, electronics and electrical engineering. The electric capacitance between two isolated electrically conductive bodies is equal to the ratio of the charge Q stored in these conductors and the electric voltage U present:</p> $C = Q/U$ <p>For accumulators and batteries, the term "capacitance" is used for the maximum charge Q that can be stored in them. It is given in ampere-hours (Ah). However, ampere-hours express the electric charge and not the electric capacitance shown here.</p> <p>Inductive = coils, relays Capacitive = capacitors, energy-saving lamps</p>
<p>Constant lighting control</p>	<p>In rooms where there is plenty of natural light, it is useful to capture the ambient brightness and the presence of persons with sensors and to adjust the artificial lighting to the required brightness with dimmable lighting. The overall brightness of the room is thus automatically kept at a constant brightness. There is a high potential for energy saving of up to 50% compared to a non-regulated system.</p>
<p>Ball head technology</p>	<p>An adjustable sensor head on presence and motion detectors for individual adjustment of the field of detection.</p>
<p>KNX</p>	<p>KNX is a field bus for building automation and controls heating plants, lighting, blinds, ventilation and safety technology holistically. The line connects sensors and actuators and in most cases supplies the bus devices with energy. Compared to conventional installation technology, KNX allows a significant reduction of the cabling required for a decentralized arrangement of bus devices. The KNX specification has been included in the European standard EN 50090; this standard has also been accepted as international standard ISO/IEC 14543-3.</p>
<p>Output</p>	<p>The physical variable "power" represents the energy per time period and is referred to as electric power if the energy sourced or delivered is electrical energy. Power is specified internationally in watts (W). A distinction is made between three different powers:</p> <p>Active power (W) This is the energy actually converted per time period. It is specified in watts (symbol W).</p> <p>Reactive power (var) This is a generally undesirable and unusable energy per time period. It is specified in Var (symbol var).</p> <p>Apparent power (VA) This is also referred to as a connected value or connected load. It is specified in volt-ampere (symbol VA).</p> <p>The capacity rating is used to identify the power of a device (electrical consumer, energy converter) and can differ greatly from the power actually converted. It is specified in the same way as effective power. The type of power specified on the rating plate is essential. In the case of motors, the deliverable mechanical power is stated, whereas for lamps, vacuum cleaners or speakers the electrical power consumed is specified. In generators as well as bicycle dynamos or alternators, the electrical power emitted is specified.</p>

<p>Light channel c1 + c2</p>	<p>Switching channel "Lights" (c1)</p> <p>Name for the output channels for motion and presence detectors. The lights are automatically switched on when the detector has been triggered by movement and the ambient light has fallen below the light value preset on the detector. If movement is no longer detected, the lighting will be switched off once the set time has elapsed.</p> <p>Note on presence detectors:</p> <p>If the detector is equipped with constant light control and the natural lighting increases, causing the ambient light to exceed the set light value, the detector switches the lights off automatically 5 minutes after the set light value is reached, despite any movement/presence. Subsequently, the lighting can be switched back on manually at any time.</p> <p>Switching channel "HVAC" – only for presence detectors (c2)</p> <p>The HVAC channel (heating, ventilation, air conditioning) is an additional contact and can be used to control heating, ventilation, air-conditioning, panel lighting etc. The contact will only be triggered by movement and is not controlled by the light value. If movement is no longer detected, the contact will switch off once the set time has elapsed.</p>
<p>master</p>	<p>A motion or presence detector that is fully equipped with electronics and relays is known as the master. Further devices (slaves – which contain only the movement measurement system and communicate a measured value to the master) can be connected to these master detectors to extend the field of detection.</p> <ul style="list-style-type: none"> - Switches the lighting/heating/ventilation/air conditioning. - Adjustment of parameters such as light value and switch-off delay time - Light value and presence/movement are detected at the master. - Processes incoming presence/motion signal from a slave device
<p>Ohm's law</p>	<p>Ohm's law makes the following correlation: If an electric voltage is applied to an object, the strength of the electric current flowing through the object changes proportionate to the voltage. Ohm's law applies only to DC and "ohmic resistances" (constant electric resistance).</p> <p>The famous URI triangle helps to understand the formula:</p> <ol style="list-style-type: none"> 1. $U = R \cdot I$ 2. $R = U / I$ 3. $I = U / R$ <p>I = current U = voltage R = resistance</p> <div style="text-align: right;">  </div>
<p>Orientation light</p>	<p>All ESYLUX DIM devices feature an "orientation light" function. This function can also be adjusted by remote control, e.g. with the ESYLUX Mobil-PDI/plus.</p> <p>This is what is referred to as a night light function. A room is dimmed to approx. 10% of the maximum luminosity of the lights if the light value (LUX) falls below the preset value.</p> <p>If the presence detector detects movement, the lighting level will be increased to the default light value. If the presence detector detects no further movements, the lighting level reverts to approx. 10% of the luminosity once the switch-off delay time has elapsed. If the ambient brightness is greater than the set light value, the presence detector switches the orientation lighting off altogether. If the value falls below the set threshold value, the orientation light comes on again.</p> <p>A major benefit is that a person does not enter a completely darkened room and there is therefore a permanent low orientation light in these rooms. The most common application is in corridors (nursing homes, hospitals) or underground garages.</p> <p>If you wish the orientation light to come on for a set period of time, you can select a duration from 1 to 60 minutes by pressing a button.</p>

Parallel connection	<p>The consumers are connected "side by side" in parallel.</p> <ul style="list-style-type: none"> - The current is shared across the individual resistors - Any number of elements can be connected in parallel - The total resistance (R_g) is always less than the smallest individual resistance - The voltage is identical everywhere in the circuit - Individual elements can be added or removed (e.g. if they burn out) without causing the other elements to fail <p>Hot plates, boilers and hair dryers, for example, are always designed according to the system of a parallel circuit.</p>
Passive infrared technology	<p>With ESYLUX motion and presence detectors, light can be directly targeted and consciously utilised. The detectors switch on the light automatically depending on the respective ambient brightness and the presence of people. Passive infrared technology makes this possible, i.e. built-in infrared sensors record thermal radiation and convert this into a measurable electric signal. Bodies, such as the human body, emit thermal radiation; this thermal radiation lies within the "infrared" range and is invisible to the human eye. The thermal image illustrates the body surface temperature distribution in the infrared range of light. The thermal radiation is collimated by an optical lens system and projected onto the infrared sensors.</p> <p>Changes in thermal radiation, i.e. a difference in temperature caused by movement, is recorded by the sensors and converted into an electric signal. The detector electronics process the signal and switch the connected consumers in accordance with the set parameters.</p>
Phase control	<p>Leading edge or trailing edge control is used to adjust or reduce the available power of a connected consumer.</p>
Floating switching contact (HVAC)/relay contact	<p>The HVAC channel (heating, ventilation, air conditioning) is an additional contact and can be used to control heating, ventilation, air-conditioning, panel lighting etc. The contact will only be triggered by movement and is not controlled by the light value. If movement is no longer detected, the contact will switch off once the set time has elapsed.</p>
Presence detectors	<p>A presence detector is a detector that detects the presence of persons using thermal energy. Unlike with a motion detector, the presence detector has permanent photometry, i.e. if, for example, the ambient or natural light is sufficient, the presence detector will not turn on the artificial light or light channel, despite any detection of movement.</p> <p>Presence detectors respond to the slightest movement, particularly during sedentary activities. As presence detectors have a demand and comfort circuit, they should be used indoors, as they can switch devices in premises with plenty of natural light and subject to extended periods of use.</p> <p>The automatic light control of a presence detector allows high energy savings by only activating connected consumers, e.g. lights, when they are specifically required. Some presence detectors have a further switching channel offering further control options, such as switching the control of heating, ventilation, air-conditioning (HVAC) and/or constant lighting control (dimming).</p> <p>The switch-on criteria for presence detectors are as follows:</p> <p>The light channel responds to the ambient brightness as well as to movement or the presence of people. If the ambient light is below the light value set on the detector, another light would be switched on. The HVAC switching channel only responds to movement or the presence of people.</p>

RCD switch (FI switch)	<p>As a rule, RCDs disconnect all poles (2- or 4-pole) in the event of a fault.</p> <p>In accordance with Kirchhoff's 1st law, currents always add up to zero at a node. In the event of a fault, the fault current flows and acts on a coil in the RCD, thereby triggering the latching mechanism.</p> <p>In Germany, RCDs are prescribed in new installations. A RCD must always be operated in combination with a fuse. Operation without an RCD is only permitted if existing protection is in place. However, existing protection is considered intact only if no changes are made to the electrical installation. As soon as something is changed, the existing protection becomes obsolete and the system must then be completely adapted to the technical standard.</p> <p>Only the combination of a circuit breaker (fuse) and RCD can effectively protect lines, the connected consumers and persons. An RCD detects fault currents as opposed to overcurrents, thereby protecting persons, whereas a fuse only protects the line from overload.</p> <p>Typical cut-out variables are 25 mA at 40 mS.</p>
Range / field of detection	<p>The range is the distance from which a presence or motion detector can detect a movement. This can only be done by heat, as the detector works with passive infrared technology. The range can be set differently for each motion and/or presence detector so that a longer and a shorter range can be achieved as necessary.</p>
Series connection	<p>In the case of series circuits, consumers are connected to each other in a series like a chain. Individual resistances add up to form a total resistance (R_g). The electricity is identical everywhere in the circuit and the voltage is shared across all individual resistors.</p> <p>Fairy lights, for example, are almost always designed according to the system of a series circuit.</p>
Relay/contactor	<p>Relays are switches that are operated by an electrical pulse. The power required to switch the relay is considerably lower than the switched power. Contactors are relays that can switch very high currents.</p>
Switching relay	<p>Relay for switching an electronic load.</p>
Fusible link	<p>Reacts to excess currents, but only works once. A fusible link interrupts a circuit when the current strength exceeds a certain value for a certain period of time by causing a fuse element to melt.</p>
Protection classes	<p>Protection classes define the electrical protection class of a device.</p> <p>There are 3 protection classes:</p> <ul style="list-style-type: none"> - Protection class I - Protection class II - Protection class III
Fuses	<p>Overcurrent protection devices (fuses) protect lines or other equipment from damage from the excessive heat that would result from overcurrent flowing over a prolonged period of time. An overcurrent can be caused by an overload or a short circuit.</p> <p>The main protective devices are:</p> <ul style="list-style-type: none"> - Fusible link - Automatic circuit breaker - RCD switch (FI switch)

Automatic circuit breaker	An automatic circuit breaker responds to excess currents and is a reusable fuse element that does not reset itself automatically. Automatic circuit breakers are overload protection devices that protect the lines from damage and/or heating due to excess current.
Slave	<p>A slave device is a presence detector that does not perform its own activities but merely forwards a movement detected by a motion measuring device to a master detector, which performs the corresponding set action.</p> <ul style="list-style-type: none"> - Only detects presence/movement. - No configuration of the slave device - Forwarding of the presence/movement signal to the master device
Voltage	The electrical voltage is a physical variable indicating how much energy is required to move an electrical charge within an electric field. The symbol for voltage is U. In the international system of units it is expressed in the unit volt (symbol: V).
Current	<p>The electrical current is the movement of charge carriers.</p> <p>In technical terminology, current often indicates its strength, i.e. the physical variable amperage with the symbol I and the unit "ampere" (symbol: A). In colloquial language, this usually refers to the transfer of electrical energy or simply the possibility of this in the form of a live installation.</p>
Transformer	Transformers are passive electrical components used to convert AC voltages and for potential isolation. They consist of two coils, the primary coil and the secondary coil, which are closely connected to each other by a magnetic field. According to the principle of a transformer, an inductive field is generated in the primary coil of the transformer, which generates an AC voltage of the same frequency in the secondary coil by means of induction. To improve the transfer of the magnetic field, the primary coil and secondary coil are connected to each other with a ferrite or iron core.
TBM	<p>TBM is the abbreviation for technical building management. The scope of technical building management includes the processes and services associated with the operation and management of buildings and building service installations. For the purposes of optimised maintenance and optimised energy consumption, this includes the technical building equipment in its entirety such as the heating, ventilation and air-conditioning systems (HVAC), lighting and the use of daylight, safety precautions, electrical equipment, energy monitoring and energy measurement with consumer meters, through to services including communication and maintenance.</p> <p>TGM provides trend information on energy consumption, warns against unnecessary energy consumption and through regulation, monitoring and optimisation can improve energy efficiency.</p>

Fully automatic mode	<p>ESYLUX presence detectors are fully automatic by default. This means:</p> <p>1. "Lighting" switching channel</p> <p>If the detector has been triggered by movement and the ambient lighting level falls below the default light value, the lighting will be automatically switched on. If movement is no longer detected, the lighting will be switched off once the set time has elapsed.</p> <p>However, should the natural lighting level increase and the ambient lighting level exceed the preset light value, the detector will automatically switch the lighting off 5 minutes after reaching the preset light value, regardless of any movement/presence. Subsequently, the lighting can be switched back on manually at any time.</p> <p>2. "HVAC" switching channel only on presence detectors</p> <p>The contact is only triggered by movement and is not controlled by the light value. If movement is no longer detected, the contact will switch off once the set time has elapsed.</p>
Ballast	<p>Ballasts are used to operate a wide variety of lights.</p> <p>In combination with a starter, for instance, they provide the right voltage spike to switch on a fluorescent lamp and to regulate the supply current during operation.</p>
WAGO (push terminals)	<p>German manufacturer of push terminal technology. These connectors are usually used in electrical installations.</p>
Resistance	<p>Electrical resistance is always specified in ohms. The capital omega from the Greek alphabet Ω is used internationally as the symbol.</p> <p>The electrical resistor is a component that reduces the current flow. It can be described like a bottleneck in a water pipe. An open circuit has an infinitely higher resistance. Each line, each electrical consumer is also a resistance.</p>
Efficiency	<p>In general, the efficiency indicates the relationship between the effort and the benefit ultimately obtained. The power efficiency is generally used, which indicates the ratio between outgoing and incoming power. The lower case eta from the Greek alphabet η is used internationally as the unit symbol.</p> <p>The ideal efficiency is 1. This means that the total incoming power is converted into the outgoing power without any loss. As the reality is usually different, the value is always smaller than 1. This can happen as a result of losses in the form of heat or mechanical friction losses.</p>
Wattage	<p>The watt is the unit of measure used in the international system of units for the power (energy converted per time period). A capital W is used as the symbol.</p> <p>Watt is a derived unit, which means that it can be expressed with base units, specifically with kg (kilograms), m (meters) and s (seconds).</p> $W = (\text{kg} \cdot \text{m}^2) / \text{s}^3$
360° anti-creep protection	<p>Full field of detection among presence detectors and motion detectors.</p>
1 - 10 V interface	<p>The 1–10 V analogue interface is the most common generic standard for controlling operating devices (for example 1–10 V electronic ballasts to control lighting). A fail-safe DC voltage signal of 1 - 10 V is used for control. The control power is generated by the electronic ballast.</p>

Piktogram explanation

 230 V ~	Mains voltage 230 V AC		Ceiling mounting		Manual mode
 12-24 V =	Supply voltage e.g. 12 - 36 V DC		Inner corner mounting		Battery included
 12-36 V ~ 12-24 V ~	Supply voltage e.g. 12 - 36 V ~, 12 - 24 V ~		Inner corner mounting with accessories		Glass surface
	KNX registered and certified		Outer corner installation		Frame available as accessory
	DALI interface		Outer corner installation with accessories		Protection type e.g. IP 55
	Supply voltage via the DALI BUS		Air quality monitoring based on VOC (volatile organic compounds)		Protection type with accessories e.g. IP 54
	DALI DSI Electronic ballast control		Temperature measurement		Controlling shutters
	DALI Adressable		Humidity measurement		Controlling awnings
	1 - 10 V interface		Acoustic signal		Controlling blinds
	Range in diameter when ceiling mounted e.g. 8 m		Acoustic sensor		USB interface
	Wall-mounted range in radius e.g. 8 m		Light sensor		LAN networkable
	Wall-mounted range in diameter e.g. Ø 16 m		Storage of current light value		Protection class II
	Field of detection e.g. 360°		Manual setting Switch-off delay time/lux values		Protection class III
	Pet zone		Light value adjustable by potentiometer		
	Anti-creep protection		Light value adjustable mechanically / electronically		
	Field of detection adjustable		Timer individually adjustable		
	Pivoting sensor head		Continuous lighting ON/OFF		
	Light channel		Light/HVAC control		
	Light / Dim channel		Dimmer function		
	Dim channel		Random function/holiday program		
	Light / HVAC channel		Alarm function		
	Recessed mounting Ceiling / wall		16 A high-performance relay		
	Surface mounting ceiling		Switching capacity per channel		
	Recessed mounting wall with accessories		Assign parameters with ETS software		
	Surface mounting ceiling/wall with accessories		Including blue mode Technology		
	Surface mounting ceiling with spacers		Remote controllable (infrared)		
	Recessed ceiling mounting		Diaphragm cable input		
	Recessed ceiling mounting with accessories		Quick and simple connection via plug-in terminals		
	Clamp mounting		DIN rail mounting		
	Wall mounting		Basket guard		

This catalogue is intended as a working basis for business.

The information in this catalogue is not binding in relation to the illustrations, design, size and colour of the products shown. We reserve the right to make changes to technology and designs with a view to improving the quality of the products. For any technical questions or to order promotional material, please contact your wholesaler or contact the ESYLUX sales department directly.
